

PRINCIPAL'S MESSAGE

“One of the most valuable skills in our economy is becoming increasingly rare” laments Cal Newport in his book “Deep Work” while referring to the loss of productivity due to the distractions in the modern times. Cal Newport is an MIT-trained computer science professor at Georgetown University, currently Director, Computer Science Ethics and Society A.B. Degree Programme there, who also writes about the intersections of technology, work, and the quest to find depth in an increasingly distracted world. “People are losing ability to go deep- spending their days instead in a frantic blur of email and social media, not even realising there’s a better way” When one gets addicted to the use of mobile phone he/she forgets the imminent priorities and ignore own deliverables. This causes procrastination and leads to the ultimate irrecoverable loss of productive time. Humans naturally wants to be connected and they derive pleasure from the feeling of importance now a days through virtual connectedness, in a subtle way. We actually need productivity of high quality and dedication in our works. Let us practice the socially useful and productive way of life, every day, to live happily and not live in virtual peril.
