

SEMESTER I

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23MAL10A	LINEAR ALGEBRA AND CALCULUS	BSC	3	1	0	0	4	2023

i) **COURSE OVERVIEW:** This course introduces students to some basic mathematical ideas and tools which are at the core of any engineering course. A brief course in Linear Algebra familiarizes students with some basic techniques in matrix theory which are essential for analyzing linear systems. The calculus of functions of one or more variables taught in this course are useful in modelling and analyzing physical phenomena involving continuous change of variables or parameters and have applications across all branches of engineering.

ii) COURSE OUTCOMES

After the completion of the course, the student will be able to:

CO1	Solve systems of linear equations.	Apply
CO2	Compute maxima and minima using partial derivatives.	Apply
CO3	Compute areas and volumes of geometrical shapes using multiple integrals.	Apply
CO4	Identify the convergence or divergence of an infinite series.	Apply
CO5	Determine the Taylor and Fourier series expansion of functions and learn their applications.	Apply

iii) SYLLABUS

Basics of Linear Algebra – Solution of systems of linear equations, row echelon form, rank, eigen values and eigen vectors, diagonalization of matrices, orthogonal transformation, quadratic forms.

Partial Differentiation and Applications – Limit and continuity of functions of two or more variables, partial derivatives, chain rule, total derivatives, maxima and minima.

Multiple Integrals – Double and triple integrals, double integrals over rectangular and non-rectangular regions, changing the order of integration, finding areas and volume, mass and centre of gravity.

Infinite series – Convergence and divergence of Infinite series, geometric series and p-series, test of convergence, Alternating series, absolute and conditional convergence.

Taylor series, Binomial series and series representation of exponential, trigonometric, logarithmic functions –Fourier Series– Euler’s formulas, Fourier sine and cosine series, Half range expansions.

iv) (a) TEXT BOOKS

- 1) H. Anton, I. Biven, S. Davis, “Calculus”, Wiley, 10th Edition, 2015.

- 2) Erwin Kreyszig, Advanced Engineering Mathematics, 10th Edition, John Wiley & Sons, 2016.

(b) REFERENCES

- 1) J. Stewart, Essential Calculus, Cengage, 2nd Edition, 2017.
 2) G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002.
 3) Peter V. O'Neil, Advanced Engineering Mathematics, Cengage, 7th Edition 2012.

v) COURSE PLAN

Module	Contents	No. of hours
I	Linear Algebra: Systems of linear equations, Solution by Gauss elimination, row echelon form and rank of a matrix, fundamental theorem for linear systems (homogeneous and non-homogeneous, without proof), Eigen values and eigen vectors. Diagonalization of matrices, orthogonal transformation, quadratic forms and their canonical forms.	12
II	Multivariable calculus-Differentiation: Concept of limit and continuity of functions of two variables, partial derivatives, Differentials, Local Linear approximations, chain rule, total derivative, Relative maxima and minima, Absolute maxima and minima on closed and bounded set.	12
III	Multivariable calculus-Integration: Double integrals (Cartesian), reversing the order of integration, change of coordinates (Cartesian to polar), finding areas and volume using double integrals, mass and centre of gravity of inhomogeneous laminas using double integral. Triple integrals, volume calculated as triple integral, triple integral in cylindrical and spherical coordinates (computations involving spheres, cylinders).	12
IV	Sequences and Series: Convergence of sequences and series, convergence of geometric series and p-series (without proof), test of convergence (comparison, ratio and root tests without proof); Alternating series and Leibnitz test, absolute and conditional convergence.	12
V	Series representation of functions: Taylor series (without proof, assuming the possibility of power series expansion in appropriate domains), Binomial series and series representation of exponential, trigonometric, logarithmic functions (without proofs of convergence); Fourier series, Euler formulas, Convergence of Fourier series (without proof), half range sine and cosine series, Parseval's theorem (without proof).	12
Total hours		60

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- **Duration – 1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory questions. Part B contains choice questions.
- **Duration – 3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23CYL10A	ENGINEERING CHEMISTRY (for all branches)	BSC	3	1	0	0	4	2023

i) **COURSE OVERVIEW:** The aim of the Engineering Chemistry program is to expose the students to basic concepts of chemistry and its Industrial as well as Engineering applications. It also let the students to familiarize with different topics such as new-generation engineering materials, storage devices, different instrumental methods etc.

ii) COURSE OUTCOMES

After the completion of the course, the student will be able to:

CO1	Apply the basic concepts of Electrochemistry in various Engineering problems.	Apply
CO2	Apply the basic concepts of UV-Visible, IR and NMR spectroscopic techniques to analyze organic compounds.	Apply
CO3	Explain the significance of conducting polymers, Nanomaterials, Alloys and composite materials in Engineering.	Understand
CO4	Explain relevant techniques used for the identification and separation of chemical compounds and mixtures.	Understand
CO5	Explain the principles of Green chemistry and various water treatment methods used for sustainability.	Understand

iii) SYLLABUS

Electrochemistry: Cell prototype- Daniel cell, Nernst equation and its uses, Primary and secondary electrodes- construction and working, applications of electrochemical series. Potentiometric titration – Acid Base titration, Fundamentals of corrosion, Galvanic series, Wet and dry corrosion – types, mechanism and its prevention.

Electrochemical power sources: different types of cells, construction, working and applications– Dry cell, Electrolytic cells, Galvanic cells, Lead-acid cell, accumulator, Lithium-ion cell- different electrode materials, Fuel cells, H₂-O₂ fuel cell.

Basics of Spectroscopy: Beer Lambert's law, Principles and applications of UV-Visible spectroscopy, Fluorescence and its applications, Woodward-Feiser rule, instrumentation of UV- Visible spectroscope, colorimetry, Principles and applications of IR spectroscopy, Number of vibrational modes – CO₂ and H₂O, Determination of force constant of diatomic molecules, Principles and applications of NMR spectroscopy, Shielding, Deshielding, Chemical shift, spin- spin splitting, MRI technique.

Engineering Materials: Basics of Polymer chemistry, Types of copolymers, Preparation, properties and applications- Butadiene Styrene, Acrylonitrile Butadiene Styrene, Kevlar, conducting polymers- Polyaniline and Polypyrrole - preparation properties and applications,

Organic Light Emitting Diode

Nanomaterials: Origin of nanomaterials, Classifications, Chemical synthesis- hydrolysis and reduction, Carbon Nano Tubes, Graphene, Quantum dots-applications.

Alloys and Composites: Cast iron, Principal non-ferrous alloys, need, properties and applications of composites, super alloys, Ceramics- structure and applications.

Instrumental methods in chemistry: Thermal methods, Thermo Gravimetric Analysis, Differential Thermal Analysis, Chromatography techniques- Thin Layer Chromatography, Column Chromatography, Gas Chromatography, High Performance Liquid Chromatography, Surface characterization using Scanning Electron Microscopy (SEM), X-ray Photoelectron Spectroscopy (XPS), Auger Electron Spectroscopy (AES).

Green Chemistry and Sustainability: Green chemistry – Principles, Matrices to express greenness- E-Factor, Atom Economy, Environmental Quotient, Green chemistry and Catalysis, R₄M₄ Models-Econoburette, Survismeter, E-waste disposal, Life Cycle Analysis, Benefits and limitations of conducting Life Cycle Analysis.

Water Technology: Water characteristics, hardness, disadvantages of hard water, Estimation of hardness- EDTA method, Ion exchange process for water softening, Dissolved Oxygen, Biological Oxygen Demand and Chemical Oxygen Demand, its estimation and significance, Municipal water treatment, disinfection of water, Reverse Osmosis, Sewage water treatment.

iv) (a) TEXT BOOKS

- 1) D. Harvey, N. Rutledge, Industrial Chemistry, ETP, first edition, 2018. ISBN: 9781788820554
- 2) M. Arif, A. Fernandez, K. P. Nair, Engineering Chemistry, first edition, Owl Books, 2019.
- 3) S. Chawla, A text book of Engineering Chemistry, second edition, Dhanpat Rai & Co. 2017.
- 4) Roy Varghese, Engineering Chemistry, Second Edition, Crown Pubs., 2019.
- 5) Prasanta Rath, Engineering Chemistry, First Edition, Cenage Learning, 2015.

(b) REFERENCES

- 1) C. N. Banwell, E. M. Mc Cash, Fundamentals of Molecular Spectroscopy, McGraw-Hill, 4th edition, 2017.

- **Duration – 1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- **Duration – 3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESB10A	ENGINEERING GRAPHICS	ESC	2	0	2	0	3	2023

i) **COURSE OVERVIEW:** Aim of the course is to enable the student to effectively perform technical communication through graphical representation as per global standards. The student will be able to apply the principles of projection and will be introduced to the fundamentals of Computer Aided Drawing (CAD).

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Construct the orthographic projection of points and lines located in different quadrants.	Apply
CO2	Prepare orthographic projection of solids by visualizing them in different positions.	Apply
CO3	Prepare multiview projection and solid models of objects using CAD tools.	Apply
CO4	Prepare assembly drawing of standard machine components using CAD tools.	Apply
CO5	Construct drawings of engineering systems with CAD tools.	Apply

iii) **SYLLABUS**

Introduction: Relevance of technical drawing, basic principles of engineering drawing, BIS code of practice for technical drawing, types of lines, planes of projection, orthographic projection of points in different quadrants. Projection of straight lines.

Orthographic projection of regular solids. Introduction to section, development, isometric and perspective projection

Introduction to Computer Aided Drawing, sketching of simple 2D geometries, editing and dimensioning of 2D geometries, creating 3D model using suitable software.

Assembly drawing of machine components using suitable CAD software.

Plan and elevation of simple building with dimensions, electrical drawing and circuit drawings using suitable CAD software.

iv) (a) **TEXT BOOKS**

- 1) Bhatt N.D, Engineering Drawing, Charotar Publishing House Pvt. Ltd, 53rd Edition, 2019.
- 1) John K.C., Engineering Graphics, Prentice Hall India Publishers, 1st Edition, 2009.
- 2) C. M. Agrawal, Basant Agrawal, Engineering Graphics, Tata McGraw-Hill, 1st Edition, 2012.

(b) REFERENCES

- 1) G. S. Phull, H. S. Sandhu, Engineering Graphics, John Wiley & Sons Inc Pvt. Ltd, 1st Edition, 2014.
- 2) P. I. Varghese, Engineering Graphics, V.I.P. Publishers, 21st Edition, 2010.
- 3) Jolhe Dhananjay, Engineering Drawing with an Introduction to AutoCAD, (1e), McGraw Hill Education, 2017.

v) COURSE PLAN

Module	Contents	No. of hours
I	Basic principles of engineering drawing, Standards and conventions, types of lines, Introduction, planes of projection, projection of points in all the four quadrants. Projection of straight lines inclined to one plane and inclined to both planes. Trace of line, inclination of lines with reference planes, true length of line inclined to both the reference planes	8
II	Orthographic projection of solids: Projection of simple solids such as triangular, rectangle, square, pentagonal and hexagonal prisms, pyramids, cone and cylinder. Projection of solids in simple position including profile view. Projection of solids with axis inclined to one of the reference planes and with axis inclined to both reference planes. Introduction to section, development, isometric and perspective projection	11
III	Introduction to Computer Aided Drawing: Role of CAD in design and development of new products, advantages of CAD. Creating two-dimensional drawing with dimensions using suitable software Introduction to Solid Modelling: Creating 3D models of various components using suitable modelling software	8
IV	Drawing of Cotter Joints, Knuckle Joint, Shaft couplings and Oldham's coupling	10
V	Drawing plan, section and elevation of single storied and two storied residential buildings with flat roof. Electrical Drawing layout for residential building. Circuit drawing and wiring drawing of simple systems	8
	Total hours	45

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- **Duration – 1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- **Duration – 3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESB10D	PROBLEM SOLVING AND PROGRAMMING IN C	ESC	2	1	2	0	4	2023

i) **COURSE OVERVIEW:** This course aims to introduce the concepts of structured programming. It introduces the basic concepts in C programming language including arrays, functions, pointers and files. This course contains an integrated lab component which equips the learner to solve computational problems using C language.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Explain the fundamentals of computer architecture and types of software.	Understand
CO2	Develop a solution using algorithm /flowchart to solve a computational problem.	Apply
CO3	Construct programs with control statements and arrays.	Apply
CO4	Make use of user defined data types or functions to solve computational problems.	Apply
CO5	Develop programs using files and pointers.	Apply

iii) **SYLLABUS**

Computer architecture & Programming Languages Basics of Computer architecture, Types of Programming Languages, System Software, Application Software, Introduction to structured programming, Algorithms, Flowcharts

C Programming Language Data Types, variables, Keywords, Constants, Operators and Expressions, Control Flow Statements

Arrays and Strings Single and Multidimensional arrays, String processing, Linear search and Bubble sort.

Functions Function prototype, Parameter passing methods, Recursive functions. Structures and union, Storage Classes

Pointers and Files- Basic pointer operations, File Operations, Sequential access and random access.

iv) (a) **TEXT BOOKS**

- 1) Byron Gottfried, Programming with C (Schaum's Outlines Series), Mcgraw Hill Education, 3rd Edition, 2017.
- 2) H. M. Deitel, P. J. Deitel, C: How to program, 7th Edition, Pearson Education, 2010.
- 3) Anita Goel, Computer Fundamentals, Pearson, 1st Edition, 2010.
- 4) Ellis Horowitz, Sartaj Sahni, Susan Anderson Freed, Fundamentals of Data Structures in C, 2nd Edition, 2008.

**(b) REFERENCES**

- 1) Brian W. Kernighan and Dennis M. Ritchie, C Programming Language, Pearson, 2nd Edition, 2015.
- 2) Rajaraman V, PHI, Computer Basics and Programming in C, 1st Edition, 2007.
- 3) Anita Goel and Ajay Mittal, Computer fundamentals and Programming in C, 1st Edition, 2013.

v) COURSE PLAN

Module	Contents	No. of hours
I	Basics of Computer architecture: Von-Neumann Architecture-Processor, Memory, Input and Output devices. Types of Programming Languages, System Software, Application Software: Compilers, Interpreters, High level and Low level languages Introduction to structured programming, Algorithm, flowcharts and Examples.	8
II	Basic structure of C program: Character set, Tokens, Identifiers in C, Variables and Data Types, Constants, Console IO Operations, printf and scanf, Operators and Expressions: Expressions and Arithmetic Operators, Relational and Logical Operators, Conditional operator, size of operator, Assignment operators and Bitwise Operators. Operators Precedence. Control Flow Statements: if Statement, Switch Statement, Unconditional Branching using goto statement, While Loop, Do While Loop, for Loop, Break and Continue statements.	9
III	Arrays: One-dimensional Arrays, Declaration of One-dimensional Arrays, Initialization of One-dimensional Arrays, Example programs-Bubble sort, Linear search, Two-dimensional Arrays, Declaration of Two-dimensional Arrays, and Initialization of Two-dimensional Arrays. String processing: In-built string handling functions Simple programs involving arrays and strings.	9
IV	Functions: The prototype declaration, Function definition. Function call: Passing arguments to a function, by value, by reference. Scope of variable names. Recursive function calls. Storage Classes. Structure and union in C, Array of structures.	9
V	Pointers: Pointer variables. Declaring and dereferencing pointer variables. Accessing arrays through pointers. File Operations: open, close, read, write, append Sequential access and random access to files: In-built file handling functions (rewind (), fseek (), ftell (), feof (), fread (), fwrite ()), simple programs involving pointers and files.	10
	Total hours	45

C PROGRAMMING LAB (15 hours)

1. Familiarization of console I/O and operators in C
 - i) Display “Hello World”
 - ii) Read two numbers, add them and display their sum
 - iii) Read the radius of a circle, calculate its area and display it
 - iv) Area of triangle after reading its sides
2. Read 3 integer values and find largest of three numbers.
3. Check whether given year is leap year.
4. Display the grade of a student after reading his mark for a subject. (Use switch)
5. Read a Natural Number and check whether the number is prime or not
6. Read a Natural Number and check whether the number is Armstrong or not
7. Read n integers, store them in an array and search for an element in the array using an algorithm for Linear Search
8. Read n integers, store them in an array and sort the elements in the array using Bubble Sort algorithm
9. Write a program for performing matrix addition, multiplication and finding the transpose.
10. Display the norm and trace of a matrix.
11. Read a string (word), store it in an array and check whether it is a palindrome word or not.
12. Read a string (ending with a \$ symbol), store it in an array and count the number of vowels, consonants and spaces in it.
13. Display the factorial of a number using functions.
14. Program to find the sum of digits of a number using recursion
15. Using structure, read and print data of n employees (Name, Employee Id and Salary)
16. Read the marks of three subjects for n students of a class and display their names in the order of rank. (Use array of structure)
17. Input and Print the sum of elements of an array using pointers
18. Create a file and perform the following
19. Write data to the file
20. Read the data in a given file & display the file content on console

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Lab Work	:	10 marks
Lab Exam	:	10 marks
Total	:	60 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- **Duration – 1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **40 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- Duration – **2 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESL1NA	ENVIRONMENTAL SCIENCE	ESC	2	0	0	0	1	2023

i) **COURSE OVERVIEW:** The goal of this course is to expose the students to the significance of natural resource management, ecosystem restoration and biodiversity conservation. The course also details the various problems related to environmental pollution, the concept of sustainability, and the role of engineering within sustainable development.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Identify the problems associated with the over utilization of natural resources and the role of engineers in natural resource management.	Apply
CO2	Explain the concepts related to the ecosystem and the significance of ecosystem restoration and biodiversity conservation.	Understand
CO3	Explain the causes, impacts and control measures of various types of environmental pollution.	Understand
CO4	Summarize the various legal provisions for environmental protection.	Understand
CO5	Discuss the concepts of sustainability and sustainable practices by utilizing engineering knowledge and principles.	Apply

iii) **SYLLABUS**

Interdisciplinary nature of environmental science, Natural resources and associated problems: Water resources, Energy resources, Food resources, Land resources. Equitable use of resources.

Eco System: Concept, Structure and Function, Productivity, Energy flow, Ecological Succession, food chains, Types of eco systems, Eco system Services

Biodiversity and its conservation: Species and ecosystem diversity, Value of biodiversity, Threats to biodiversity, Conservation of biodiversity

Environmental Pollution: Causes, Effects and Control measures of Air, Water, Soil and Noise Pollution. Solid and Hazardous Waste Management

Contemporary Environmental issues: Environmental ethics, Climate change, Water conservation, Legal provisions for environmental protection

Sustainability Practices: Concepts of sustainability, Green engineering, Sustainable habitat, Sustainable Urbanisation, Circular Economy.

iv) (a) **TEXT BOOKS**

1) Bharucha, E., Textbook for Environmental Studies, UGC, New Delhi, 3rd edition, 2021.

- 2) Mishra, D. D., Fundamental Concepts in Environmental Studies, S. Chand & Co. Ltd, 4th edition, 2014.
- 3) Joseph, K. and Nagendran, R., Essentials of Environmental Studies, Pearson Education (Singapore) Pvt. Ltd, India, 2017.
- 4) Allen, D. T. and Shonnard, D. R., Sustainable Engineering: Concepts, Design and Case Studies, 2011.

(b) REFERENCES

- 1) Dhameja, S. K., Environmental Engineering and Management, S.K. Kataria & Sons, 2013.
- 2) Striebig, B. and Ogundipe, A. A., Maria Papadakis, Engineering Applications in Sustainable Design and Development, 2015.

v) COURSE PLAN

Module	Contents	No. of hours
I	Interdisciplinary nature of environmental science - definition, scope and importance. Natural resources and associated problems: Water resources- use and over utilization of surface and groundwater, floods, drought, conflicts over water. Energy resources-growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources (case studies). Food resources- effects of modern agriculture, fertilizers-pesticides problems, water logging, salinity. Land resources- land degradation, soil erosion, desertification. Role of individuals in the conservation of natural resources, Equitable use of resources	6
II	Ecosystem- concept, structure and function, productivity, energy flow, ecological succession, food chains and food webs, ecological pyramids, Types of ecosystems. Characteristic features and functions of the following ecosystems- Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystem, Ecosystem Services. Biodiversity and its conservation- Species and ecosystem diversity, Value of biodiversity-consumptive use, productive use, social, ethical, aesthetic values. Hotspots of biodiversity, Threats to biodiversity-habitats loss, poaching of wildlife, man-wildlife conflicts, endangered endemic species of India. Conservation of biodiversity.	6
III	Environmental Pollution- definition, causes, effects and control measures of air pollution, water pollution, soil pollution and noise pollution. Solid and Hazardous Waste Management-causes, effects and control measures of urban and industrial wastes- 3R concept, zero waste management -case studies. Role of individual in prevention of pollution.	6

IV	Environmental ethics , Contemporary Environmental issues- global warming, climate change, sea level rise. International efforts for environmental protection, National action plan on climate change. Water conservation- rainwater harvesting, watershed management, conservation of wetlands- Ramsar sites in India. Legal provisions for environmental protection.	6
V	Sustainability - Concept, Evolution, Social, Environmental and Economic Sustainability, challenges for sustainable development, Sustainable Development Goals. Sustainability Practices- Green engineering, Sustainable habitat - Green buildings, Sustainable Urbanisation, Industrial Ecology, Circular Economy. Case studies.	6
Total hours		30

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	20 marks each
Assignment/Project/Case study etc.	:	15 marks
Final Exam	:	40 marks
Total	:	100 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- **Duration – 1.5 hours**

viii) NO END SEMESTER EXAMINATION

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23CYP10A	ENGINEERING CHEMISTRY LAB	BSC	0	0	2	0	1	2023

i) **COURSE OVERVIEW:** This course is designed to familiarize with the basic experiments in industrial chemistry and to accustom the students with the handling and analyzing chemicals and standard laboratory equipments.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Use volumetric titration techniques for quantitative analysis of water.	Apply
CO2	Use spectroscopic techniques for analyzing and interpreting the IR spectra and NMR spectra of some organic compounds.	Apply
CO3	Use instrumental techniques for quantitative chemical analysis.	Apply
CO4	Organize scientific experiments as a team to analyze the results of such experiments.	Analyze
CO5	Interpret experimental data by themselves to apply them to real world problems.	Analyze

iii) **SYLLABUS**

1. Estimation of total hardness of water by EDTA method.
2. Analysis of IR and ^1H NMR spectra of organic compounds.
3. Determination of wavelength of absorption maximum and colorimetric estimation of Fe^{3+} in solution.
4. Determination of molar absorptivity of a compound.
5. Estimation of chloride in water by argentometric method.
6. Calibration of pH meter and determination of pH of a solution.
7. Potentiometric titration: Acid – base titration
8. Estimation of dissolved oxygen in water by Winkler's method.

iv) (a) **TEXT BOOKS**

- 1) R. K. Mohapatra, Engineering Chemistry with Laboratory Experiments, 2015, First edition, PHI Learning, New Delhi.
- 2) S. C. George, R. Jose, Lab Manual of Engineering Chemistry, 2019, First edition, S. Chand & Company Pvt Ltd, New Delhi.
- 3) E. Slowinski, W. C. Wolsey, Chemical Principles in the Laboratory, 2008, Cengage Learning, 11th edition, New Delhi.

**v) COURSE PLAN**

Module	Contents	No. of hours
I	Estimation of total hardness of water by EDTA method.	2
II	Analysis of IR and ¹ H NMR spectra of organic compounds.	2
III	Determination of wavelength of absorption maximum and colorimetric estimation of Fe ³⁺ in solution.	2
IV	Determination of molar absorptivity of a compound.	2
V	Estimation of chloride in water by argentometric method.	2
VI	Calibration of pH meter and determination of pH of a solution.	1
VII	Potentiometric titration: Acid – base titration	2
VIII	Estimation of dissolved oxygen in water by Winkler's method.	2
Total hours		15
Total hours for two batches		30

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
Class work/ Assessment /Viva-voce	:	55 marks
Written Examination	:	40 marks
Total	:	100 marks

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESB10P	MANUFACTURING AND CONSTRUCTION PRACTICES B	ESC	1	0	2	0	2	2023

i) COURSE OVERVIEW

- This subject for exposing the students to the various theoretical and practical aspects of, manufacturing processes and familiarize various tools, measuring device, practices and machines used in workshop section.
- The goal of this course is to introduce the students to the field of Civil Engineering and its importance in the development of the Country. The course is designed to have lecture sessions on an introduction to the various fields of Civil Engineering and different aspects of construction. The workshop session will provide hands-on experience in certain construction-related activities including surveying and levelling.

ii) COURSE OUTCOMES

After the completion of the course, the student will be able to:

CO1	Explain the basic manufacturing, metal joining and machining processes	Understand
CO2	Demonstrate general safety precautions in different mechanical workshop trades.	Understand
CO3	Prepare simple models using fitting, carpentry, sheet metal, welding and 3D printing techniques.	Apply
CO4	Identify the tools and equipment used in fitting, carpentry, sheet metal, welding and various machine tools.	Apply
CO5	Explain the various disciplines of Civil Engineering and its relevance in the development of the nation.	Understand
CO6	Explain the different structural elements of a building and the building rules and regulations.	Understand
CO7	Apply engineering principles and tools to set-out a plan, estimate the area and profile of plots, and construct masonry wall.	Apply
CO8	Examine the quality of different building blocks.	Apply
CO9	Make use of plumbing tools to install fixtures like tap, T-Joint, elbow, bend etc.	Apply

iii) SYLLABUS

Introduction to Workshop practice: Workshop practice, shop floor precautions, ethics and First Aid knowledge. Studies of mechanical tools, components and their applications: Tools: Screw drivers, spanners, Allen keys, cutting pliers etc. and Accessories

Sheet Metal–Sheet metal forming, Sheet metal cutting, Forging, Rolling, Extrusion. Welding– Elementary ideas of joining process-welding, soldering and brazing. Fitting– Study of tools, Practice in filing, cutting. Male and female joints. Carpentry– Study of tools and joints. Practice in planning, chiseling, marking and sawing.

Machine Tools (Basic elements, Working principle and types of operations), Lathe, Drilling Machine, Shaper, planer, slotter, Milling Machine, Grinding machine Machining processes: turning, taper turning, thread cutting, shaping, drilling, grinding, milling. Introduction to CNC and 3D Printing.

General Introduction to Civil Engineering: Relevance of Civil Engineering in the development of the nation. Brief introduction to major disciplines of Civil Engineering: Surveying, Structural Engineering, Geotechnical Engineering, Hydraulics & Water Resources, Transportation Engineering, Environmental Engineering, Construction planning & Project management, GIS.

Structural elements of a building: Foundation, plinth, lintel, masonry wall, column, beam, slab, sunshade, parapet, staircase. Plinth area, built up area, carpet area, floor area ratio. Permission plan of a building – Demonstration. Building rules and regulations: NBC, KBR & CRZ norms.

Surveying: Principles, instruments used. Levelling: Principles of levelling using dumpy level - simple levelling, differential levelling. Demonstration of Total Station. Brick masonry – Types of bonds, Masonry arches, number of bricks for construction, other types of building blocks. Construction materials – cement, mortar, concrete. Plumbing tools. Types of roofs, Flooring materials.

iv) (a) TEXT BOOKS

v) COURSE PLAN

Module	Contents	No. of hours
I	Machine shop	1
II	Fitting shop	1
III	Carpentry	1
IV	Welding shop (Arc welding + Gas welding)	1
V	Sheet Metal	1
VI	CNC	1
VII	3D Printing	1
VIII	Compute area of a given plot using tape, EDM etc.	1
IX	Levelling – Plot the longitudinal section of a road.	1
X	Setting out of a building: Set out a building as per the given building plan. Each group can set out one or two rooms of the building.	1
XI	Construct a wall of height 50 cm and wall thickness 1½ bricks using English bond (No mortar required) – corner portion – length of side walls 60 cm	1
XII	Cast paver blocks using mortar and test for strength (Include sustainable materials also)	1

XIII	Tests for strength of various types of building blocks	1
XIV	Study on plumbing and install plumbing fixtures like Tap, T-Joint, Elbow, Bend, Threading etc.	1
XV	Plan a rainwater harvesting system	1
Total hours		15

PRACTICALS (15 hours)

1. Machine shop
2. Fitting shop
3. Carpentry
4. Welding shop (Arc welding + Gas welding)
5. Sheet Metal
6. CNC
7. 3D Printing
8. Compute area of a given plot using tape, EDM etc.
9. Levelling – Plot the longitudinal section of a road.
10. Setting out of a building: Set out a building as per the given building plan. Each group can set out one or two rooms of the building.
11. Construct a wall of height 50 cm and wall thickness 1½ bricks using English bond (No mortar required) – corner portion – length of side walls 60 cm
12. Cast paver blocks using mortar and test for strength (Include sustainable materials also)
13. Tests for strength of various types of building blocks
14. Study on plumbing and install plumbing fixtures like Tap, T-Joint, Elbow, Bend, Threading etc.
15. Plan a rainwater harvesting system

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	: 5 marks
CA Exams (2 numbers)	: 10 marks each
Assignment/Project/Case study etc.	: 15 marks
Lab Work	: 10 marks
Lab Exam	: 10 marks
Total	: 60 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **40 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- Duration – **2 hours**

SEMESTER II

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23MAL10B	VECTOR CALCULUS, DIFFERENTIAL EQUATIONS AND TRANSFORMS	BSC	3	1	0	0	4	2023

i) **COURSE OVERVIEW:** The objective of this course is to familiarize the prospective engineers with some advanced concepts and methods in Mathematics which include the Calculus of vector valued functions, ordinary differential equations and basic transforms such as Laplace and Fourier Transforms which are invaluable for any engineer's mathematical tool box. The topics treated in this course have applications in all branches of engineering.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Compute the derivatives and line integrals of vector functions and learn their applications.	Apply
CO2	Evaluate surface and volume integrals and learn their inter-relations and applications.	Apply
CO3	Solve linear ordinary differential equations.	Apply
CO4	Apply Laplace transform to solve ODEs arising in engineering.	Apply
CO5	Apply Fourier transforms of functions to solve problems arising in engineering.	Apply

iii) **SYLLABUS**

Vector Calculus – Derivative of vector function, Gradient, Divergence, Curl, Line integral, conservative fields.

Green's theorem, surface integral, Gauss divergence theorem, Stokes' theorem.

Ordinary Differential Equations – Homogeneous and Non-Homogeneous linear differential Equations, Euler-Cauchy equations. Method of undetermined coefficients and Method of variation of parameters.

Laplace transforms – Laplace Transform and its inverse, shifting theorems, Laplace transform of derivatives and integrals, solution of differential equations using Laplace transform, Unit step function. Dirac delta function. Convolution theorem and its applications.

Fourier Transforms – Fourier integral representation, Fourier sine and cosine integrals. Fourier transform and inverse Fourier transform. Fourier sine and cosine transforms, inverse sine and cosine transform. Convolution theorem.

iv) (a) **TEXT BOOKS**

- 1) H. Anton, I. Biven, S. Davis, "Calculus", Wiley, 10th Edition, 2015.

- 2) Erwin Kreyszig, Advanced Engineering Mathematics, 10th Edition, John Wiley & Sons, 2016.

(b) REFERENCES

- 1) George F Simmons: Differential Equation with Applications and its historical Notes, 2nd edition, McGraw Hill Education India 2002.
- 2) Hemen Datta, Mathematical Methods for Science and Engineering, Cengage Learning, 1st edition.
- 3) B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 44th Edition, 2018.

v) COURSE PLAN

Module	Contents	No. of hours
I	Calculus of vector functions: Vector valued function of single variable, derivative of vector function and geometrical interpretation, motion along a curve-velocity, speed and acceleration. Concept of scalar and vector fields, Gradient and its properties, directional derivative, divergence and curl, Line integrals of vector fields, work as line integral, Conservative vector fields, independence of path and potential function (results without proof).	12
II	Vector integral theorems: Green’s theorem (for simply connected domains, without proof) and applications to evaluating line integrals and finding areas. Surface integrals over surfaces of the form $z = g(x, y)$, $y = g(x, z)$ or $x = g(y, z)$, Flux integrals over surfaces of the form $z = g(x, y)$, $y = g(x, z)$ or $x = g(y, z)$, divergence theorem (without proof) and its applications to finding flux integrals, Stokes’ theorem (without proof) and its applications to finding line integrals of vector fields and work done.	12
III	Ordinary differential equations: Homogenous linear differential equation of second order, superposition principle, general solution, homogenous linear ODEs with constant coefficients-general solution. Solution of Euler-Cauchy equations (second order only). Existence and uniqueness (without proof). Non homogenous linear ODEs-general solution, solution by the method of undetermined coefficients (for the right-hand side of the form x^n , e^{kx} , $\sin ax$, $\cos ax$, $e^{kx}\sin ax$, $e^{kx}\cos ax$ and their linear combinations), methods of variation of parameters. Solution of higher order equations-homogeneous and non-homogeneous with constant coefficient using method of undetermined coefficient.	12
IV	Laplace transforms: Laplace Transform and its inverse ,Existence theorem (without proof) , linearity, Laplace transform of basic functions, first shifting theorem, Laplace transform of derivatives and integrals, solution of differential equations using Laplace	12

	transform, Unit step function, Second shifting theorems. Dirac delta function and its Laplace transform, Solution of ordinary differential equation involving unit step function and Dirac delta functions. Convolution theorem (without proof) and its application to finding inverse Laplace transform of products of functions.	
V	Fourier Transforms: Fourier integral representation, Fourier sine and cosine integrals. Fourier sine and cosine transforms, inverse sine and cosine transform. Fourier transform and inverse Fourier transform, basic properties. The Fourier transform of derivatives. Convolution theorem (without proof).	12
Total hours		60

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory questions. Part B contains choice questions.
- Duration – **3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23PYL10A	ENGINEERING PHYSICS (for all branches)	BSC	3	1	0	0	4	2023

i) **COURSE OVERVIEW:** The aim of the course is to develop scientific attitude in students and offer them an understanding of physical concepts behind various engineering applications. It creates an urge in students to think creatively in emerging areas of Physics.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Describe the characteristics of different types of oscillations and waves.	Understand
CO2	Explain natural physical processes and related technological advances using principles of optics	Understand
CO3	Generalise the principles of quantum mechanics to explain the behaviour of matter in the atomic and subatomic level	Understand
CO4	Describe the fundamentals of lasers and the principles behind various solidstate lighting devices and fibre optic communication system.	Understand
CO5	Explain the fundamental ideas of Ultrasonics and acoustics in order to facilitate technological advancement.	Understand

iii) **SYLLABUS**

Oscillations and Waves: Harmonic oscillations – Damped harmonic oscillations, Forced harmonic oscillations, Q- factor, Amplitude resonance, comparison of electrical and mechanical oscillator. Wave motion – Longitudinal waves and Transverse waves, One dimensional wave equation and solution, three-dimensional wave equations, Transverse vibrations along a stretched string.

Quantum Mechanics & Nano technology: Wave function, Uncertainty principle, Time dependent and time independent Schrodinger wave equations, Applications of Schrodinger wave equation - particle in one-dimensional potential well, quantum mechanical tunneling. Introduction to nanoscience and technology, significance of surface to volume ratio, Quantum confinement, Characterization techniques – XRD, UV-Visible Spectroscopy, Applications of nanomaterials.

Laser and Photonics: Principles of Laser, Properties of laser, Ruby laser and Helium neon laser, Applications of Laser. Holography-construction of hologram, reconstruction of hologram, Applications. Introduction to photonics - photonic devices - Light Emitting Diode, Solar cells, Optical fibre – Principle of OFC, Numerical aperture, Types of fibers – step index fibre , Graded index fibre, Fibre Optic Communication System, Applications of Optical fibre, Fibre optic sensors.

Acoustics & Ultrasonic: Acoustics - characteristics of musical sounds, absorption coefficient, reverberation time- Sabine’s formula (no derivation), significance, factors affecting architectural acoustics and their remedies.

Ultrasonics - production by magnetostriction oscillator and piezoelectric oscillator, detection of ultrasonic waves - thermal and piezoelectric methods, ultrasonic diffractometer-, applications of ultrasonic waves -SONAR, NDT, medical applications.

iv) (a) TEXT BOOKS

- 1) M.N. Avadhanulu, P.G. Kshirsagar, T.V.S Arun Murthy, A Text book of Engineering Physics, S. Chand &Co., Revised Edition, 2014

v) COURSE PLAN

Module	Contents	No. of hours
I	<p>Oscillations and Waves: Harmonic oscillations, damped harmonic motion - derivation of differential equation and its solution, over damped, critically damped and under damped cases, Quality factor-expression, forced oscillations - differential equation, derivation of expressions for amplitude and phase of forced oscillations, amplitude resonance - expression for resonant frequency, sharpness of resonance, electrical analogy of mechanical oscillators</p> <p>Wave motion- distinction between transverse and longitudinal waves, derivation of one-dimensional wave equation and its solution, three-dimensional wave equation and its solution (no derivation), transverse vibration in a stretched string, statement of laws of Vibration.</p>	12
II	<p>Wave Optics: Interference of light- theory of thin films - cosine law (Reflected system), derivation of the conditions of constructive and destructive interference, interference due to wedge shaped films - determination of thickness and test for optical planeness, Newton’s</p>	12

	<p>rings- measurement of wavelength and refractive index, antireflection coatings.</p> <p>Diffraction of light, Fresnel and Fraunhofer classes of diffraction, diffraction due to double slit, diffraction grating-Grating equation, Rayleigh criterion for limit of resolution, resolving and dispersive power of a grating with expression (no derivation)</p>	
III	<p>Quantum Mechanics & Nanotechnology: Introduction for the need of Quantum mechanics, wave nature of Particles, de-Broglie wavelength, uncertainty principle, Applications-absence of electrons inside a nucleus and natural line broadening mechanism, physical meaning of wave function, formulation of time dependent and independent Schrodinger wave equations, Applications of Schrodinger equation - Particle in a one dimensional box- derivation for normalised wave function and energy Eigen values, Quantum mechanical tunnelling (qualitative).</p> <p>Introduction to nanoscience and technology, Effect of surface to volume ratio for nanomaterials, quantum confinement in one dimensional, two dimensional and three-dimensional particles - nano sheets, nano wires and quantum dots, characterization techniques - XRD analysis, UV visible spectroscopy, applications of nanotechnology (qualitative ideas)</p>	12
IV	<p>Laser and Photonics: Properties of laser, Absorption and emission of radiation, Spontaneous emission and stimulated emission, Population inversion, Metastable states, basic components of laser, Active medium, pumping mechanism, Optical resonant cavity, working principle. Construction and working of Ruby laser and Helium neon laser, Applications of lasers. Holography – Advantage of hologram over photograph, Recording of hologram, reconstruction of hologram, Applications of hologram.</p> <p>Introduction to photonics - photonic devices - Light Emitting Diode, Solar cells - I-V characteristics, Fiber Optics - Principle of light propagation through optical fiber, Classification of optical fibers - Step index and Graded index fibres, Numerical aperture – Derivation, Fibre optic communication system (block diagram), Applications of optical fiber, Fiber optic sensors.</p>	12
V	<p>Acoustics & Ultrasonics: Acoustics - Classification of Sound- Musical Sound-Noise, Characteristics of Musical Sounds-Pitch or Frequency- Loudness or Intensity Measurement of Intensity Level-Decibel- Quality or timbre, Absorption coefficient, Reverberation, Reverberation Time-Significance - Sabine's formula (no derivation). Factors affecting architectural acoustics and their remedies.</p> <p>Ultrasonics - Production- Magnetostriction effect and Piezoelectric effect, Magnetostriction oscillator and Piezoelectric oscillator – Working, Detection of ultrasonic waves - Thermal and Piezoelectric methods. Ultrasonic diffractometer – determination of velocity,</p>	12

	Applications of ultrasonic waves – industrial applications - SONAR, NDT, Medical applications.	
	Total hours	60

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- Duration – **3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESL10C	ENGINEERING MECHANICS	ESC	2	1	0	0	3	2023

i) **COURSE OVERVIEW:** Goal of this course is to expose the students to the fundamental concepts of mechanics and enhance their problem-solving skills. It introduces students to the influence of applied force system and the geometrical properties of the rigid bodies while stationary or in motion. After this course students will be able to recognize similar problems in real-world situations and respond accordingly.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Explain the principles and theorems related to rigid body mechanics.	Understand
CO2	Apply the principles of statics to solve problems involving different force systems.	Apply
CO3	Apply the properties of distributed areas and masses for solving problems involving rigid bodies.	Apply
CO4	Analyse rigid body motion under translation and rotation.	Apply
CO5	Apply rigid body motion under simple harmonic motion and plane motion simple harmonic motion and plane motion.	Apply

iii) **SYLLABUS**

Introduction to engineering mechanics - Basic principles of statics, Composition and resolution of forces. Resultant of coplanar concurrent and coplanar non-concurrent forces - Varignon's Theorem of Moments. Equilibrium conditions- Analysis of single and connected bodies.

Parallel coplanar forces - Couple - Resultant of parallel forces - Centre of parallel forces - Equilibrium of parallel forces. Equilibrium of beams- Support reactions- Principle of virtual work. Friction- Analysis of wedge and ladder friction.

Forces in space - Vectorial representation of forces, moments and couples - Resultant and equilibrium equations for concurrent forces in space - Concurrent forces in space. Properties of surfaces - Centroid of regular and composite areas. Area moment of inertia- Parallel axis theorem - Perpendicular axis theorem -Polar moment of inertia, Radius of gyration. Mass moment of inertia of ring, cylinder and uniform disc.

Introduction to kinematics - Rectilinear translation. Curvilinear translation – tangential and centripetal accelerations. Impulse momentum equation and work energy equation. Projectile motion. Introduction to kinetics - Equation of motion - D'Alembert's principle- Motion on horizontal and inclined surfaces - Motion of connected bodies.

Rotation - Kinematics of rotation- Equation of motion for a rigid body rotating about a fixed axis - Rotation under a constant moment.

Oscillation of bodies having Simple Harmonic Motion- Time period of simple and compound pendulum. Mechanical vibrations- degree of freedom – spring mass model- free vibration - natural frequency. Plane motion of rigid body - Instantaneous centre of rotation - Motion of connecting rod.

iv) (a) TEXT BOOKS

v) COURSE PLAN

Module	Contents	No. of hours
I	Introduction to engineering mechanics - Basic principles of statics, Composition and resolution of forces. Resultant of coplanar concurrent and coplanar non-concurrent forces - Varignon’s Theorem of Moments. Equilibrium conditions- Analysis of single and connected bodies.	9
II	Parallel coplanar forces - Couple - Resultant of parallel forces - Centre of parallel forces - Equilibrium of parallel forces. Equilibrium of beams- Support reactions- Principle of virtual work. Friction- Analysis of wedge and ladder friction.	9
III	Forces in space - Vectorial representation of forces, moments and couples - Resultant and equilibrium equations for concurrent forces in space - Concurrent forces in space. Properties of surfaces - Centroid of regular and composite areas. Area moment of inertia- Parallel axis theorem - Perpendicular axis theorem -Polar moment of inertia, Radius of gyration. Mass moment of inertia of ring, cylinder and uniform disc.	9

IV	Introduction to kinematics - Rectilinear translation. Curvilinear translation – tangential and centripetal accelerations. Impulse momentum equation and work energy equation. Projectile motion. Introduction to kinetics - Equation of motion - D’Alembert’s principle- Motion on horizontal and inclined surfaces - Motion of connected bodies.	9
V	Rotation - Kinematics of rotation- Equation of motion for a rigid body rotating about a fixed axis - Rotation under a constant moment. Oscillation of bodies having Simple Harmonic Motion- Time period of simple and compound pendulum. Mechanical vibrations- degree of freedom – spring mass model- free vibration - natural frequency. Plane motion of rigid body - Instantaneous centre of rotation - Motion of connecting rod.	9
Total hours		45

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory questions. Part B contains choice questions.
- Duration – **3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESL10J	BASICS OF ELECTRICAL ENGINEERING A (Fractal Course)	ESC	2	0	0	0	2	2023

i) **COURSE OVERVIEW:** This course aims to equip the students with an understanding of the fundamental principles of electrical engineering.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Apply fundamental circuit laws and principles of electromagnetism to solve simple DC electric circuits and magnetic circuits respectively.	Apply
CO2	Solve simple AC circuits using the alternating current fundamentals.	Apply
CO3	Explain the principle of operation and characteristics of DC Motors	Understand

iii) **SYLLABUS**

Basic concepts of DC circuits: Ohm's Law and Kirchhoff's laws, Star-delta conversion, Analysis of DC circuits, Mesh analysis, Node analysis.

Magnetic Circuits: Basic Terminology, Simple Magnetic circuits, Electromagnetic Induction, Faraday's laws, Lenz's law, Self-inductance and mutual inductance.

Alternating Current fundamentals: Basic definitions, Average, RMS values, AC Circuits, Phasor representation, Analysis of simple AC circuits (R, L, C, RL, RC, RLC Series circuits)

Three phase AC systems, Generation of three phase voltages, star and delta connections.

DC Motors-Constructional details of DC machines, Principle of operation, Back EMF, Torque equation, Types, Performance characteristics, Applications

iv) (a) **TEXT BOOKS**

v) **COURSE PLAN**

Module	Contents	No. of hours
I	DC circuits: Review of Elementary concepts of DC circuits, Current and Voltage Division Rules, Star-delta conversion (resistive networks only-derivation not required), Numerical problems. Analysis of DC circuits: Mesh current method, Node voltage method. Solution of network equations by matrix method, Numerical problems. Magnetic Circuits: Review of Magnetic Circuits, Series magnetic circuits with composite materials, Numerical problems.	9
II	Electromagnetic Induction: Faraday's laws, Lenz's law, statically induced and dynamically induced emfs, Self-inductance and mutual inductance, coefficient of coupling (derivation not required), Numerical Problems. Alternating Current fundamentals: Generation of alternating voltages, Basic definitions, Average and RMS values of sinusoidal waveforms, Numerical Problems. Analysis of AC Circuits: Phasor representation of sinusoidal quantities, Complex forms, Purely resistive, inductive and capacitive circuits; Analysis of RL, RC and RLC series circuits, active, reactive and apparent power. Numerical problems.	9
III	Three phase AC systems: Generation of three phase voltages, advantages of three phase systems, star and delta connections (balanced only), relation between line and phase voltages, line and phase currents, Power in three phase circuits, Numerical problems. DC Machines -Constructional details of DC machines, Principle of operation of DC generator and DC motor, Back EMF, Torque equation, Types, Performance characteristics, Applications.	12
Total hours		30

vi) **CONTINUOUS ASSESSMENT EVALUATION PATTERN**

Attendance	:	5 marks
CA Exams (1 number)	:	20 marks
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **One tests of 30 marks** (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory questions. Part B contains choice questions.
- Duration – **3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESL10L	BASICS OF ELECTRONICS ENGINEERING (Fractal Course)	ESC	2	0	0	0	2	2023

i) **COURSE OVERVIEW:** This course aims to equip the students with an understanding of the fundamental principles of electronics and communication engineering.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Describe the principles of semiconductor devices, its characteristics and various electronic circuits	Understand
CO2	Explain the basic working of Op-Amp, logic gates, radio and cellular communication systems.	Understand

iii) **SYLLABUS**

PN Junction diode: Principle of operation, V-I characteristics, breakdown mechanisms, Zener diode and its characteristics. Rectifiers and Power supplies: Block diagram of a dc power supply, working of a full wave bridge rectifier, capacitor filter (no analysis), working of simple Zener voltage regulator. Bipolar Junction Transistors: structure, principle of operation, relation between current gains in Common Emitter, Common Base and Common Collector configurations, input and output characteristics of CE configuration.

Amplifiers: Concept of voltage divider biasing, circuit diagram and working of CE (RC coupled) amplifier with its frequency response. Integrated Circuits: Analog IC; Operational Amplifier, block diagram, ideal characteristics, inverting and non-inverting Amplifier. Digital IC: Logic Gates AND, OR, NOT, Universal Gates; truth table, De-Morgans law, Realization of simple Boolean functions.

Radio communication: Modulation, need for modulation, Principle of AM, mathematical expression, waveform, frequency spectrum and bandwidth of AM, Principle of FM, mathematical expression, waveform. Radio Receivers: block diagram of super heterodyne receiver (AM&FM). Mobile communication: Basic principles of cellular communications, concept of cells, frequency reuse, hand off.

v) COURSE PLAN

Module	Contents	No. of hours
I	<p>PN Junction diode: Principle of operation, V-I characteristics, breakdown mechanisms, Zener diode and its characteristics</p> <p>Rectifiers and Power supplies: Block diagram of a dc power supply, working of a full wave bridge rectifier, capacitor filter (no analysis), working of simple Zener voltage regulator</p> <p>Bipolar Junction Transistors: structure, principle of operation, relation between current gains in Common Emitter (CE), Common Base (CB) and Common Collector (CC) configurations, input and output characteristics of CE configuration.</p>	10
II	<p>Amplifiers: Concept of voltage divider biasing, circuit diagram and working of CE (RC coupled) amplifier with its frequency response</p> <p>Integrated Circuits: Analog IC; Operational Amplifier, block diagram, ideal characteristics, inverting and non-inverting Amplifier</p> <p>Digital IC: Logic Gates AND, OR, NOT, Universal Gates; truth table, De-Morgans law, Realization of simple Boolean functions.</p>	10
III	<p>Radio communication: Modulation, need for modulation, Principle of AM, mathematical expression, waveform, frequency spectrum and bandwidth of AM, Principle of FM, mathematical expression, waveform</p> <p>Radio Receivers: block diagram of super heterodyne receiver (AM&FM).</p> <p>Mobile communication: Basic principles of cellular communications, concept of cells, frequency reuse, hand off.</p>	10
Total hours		30

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (1 number)	:	20 marks
Assignment/Project/Case study etc.	:	15 marks
Total	:	40 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **One tests of 30 marks** (2 ½ modules to be covered in each exam)
- **Duration – 1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **60 marks**.
- Part A contains compulsory questions. Part B contains choice questions.
- Duration – **3 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESB10G	PYTHON PROGRAMMING	ESC	2	0	2	0	3	2023

i) **COURSE OVERVIEW:** The objective of the course is to introduce Python programming and develop programming skills to manage the development of software systems. It covers data processing in Python and introduces Machine Learning and Artificial Intelligence-based applications and tools, Data Science and Data Visualization applications.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Explain the fundamental concepts in Python.	Understand
CO2	Illustrate uses of conditional statements and iterative statements in Python.	Apply
CO3	Develop programs by utilizing the modules Lists, Tuples, Sets and Dictionaries in Python.	Apply
CO4	Develop programs by using user defined functions.	Apply
CO5	Implement programs in Python to process data stored in files by utilizing the modules NumPy, Matplotlib, and Pandas.	Apply

iii) **SYLLABUS**

Basics of Python- Getting Started with Python Programming, Basic coding skills- Working with data types, Control statements, Selection structure, Iteration structure ,Functions, Python data structures: Lists , Work with tuples, Sets, Dictionaries, Strings and lists, Object Oriented Programming: Design with classes, Exceptions, Visualization and File handling modules in python -NumPy, matplotlib, pandas.

iv) (a) **TEXT BOOKS**

- 1) Kenneth A Lambert., Fundamentals of Python: First Programs, 2/e, Cengage Publishing, 2016 Rajaraman, V., Computer Basics and C Programming, Prentice-Hall India.
- 2) David J. Pine, Introduction to Python for Science and Engineering, CRC Press, 2021.

(b) **REFERENCES**

- 1) Wes McKinney, Python for Data Analysis, 2nd Edition, Shroff / O'Reilly Publishers, 2017
- 2) Allen B. Downey, Think Python: How to Think Like a Computer Scientist, 2nd Edition, Schroff, 2016.
- 3) Michael Urban and Joel Murach, Python Programming, Shroff/Murach, 2016.
- 4) David M.Baezly, Python Essential Reference. Addison-Wesley Professional; 4th Edition, 2009.Charles Severance. Python for Informatics: Exploring Information.

v) COURSE PLAN

Module	Contents	No. of hours
I	Getting Started with Python Programming - Running code in the interactive shell, Editing, Saving, and Running a script. Using editors - IDLE, Jupyter. Basic coding skills - Working with data types, Numeric data types and Character sets, Keywords, Variables and Assignment statement, Operators, Expressions, Working with numeric data, Type conversions, Comments in the program. Input, Processing, and Output. Formatting output. How Python works. Detecting and correcting syntax errors. Using built in functions and modules in math module.	8
II	Building Python Programs: Control statements using break, continue and pass. Selection structure (if-else, switch-case), Iteration structure (for, while). Functions: Arguments and return values, Variable scopes and parameter passing, Named arguments, Main function, Working with recursion, Lambda functions.	8
III	Python data structures: Lists - Basic List Operations and Methods, List of lists, Slicing, Searching and sorting list. Work with tuples, Sets, Dictionaries – Dictionary Methods, adding and removing keys, accessing and replacing values, traversing dictionaries. Strings and lists — String traversal and comparison with examples.	10
IV	Object Oriented Programming: Design with classes - Objects and Classes, Methods, Instance Variables, Constructor, Accessors and Mutators. Structuring classes with Inheritance and Polymorphism. Abstract Classes. Exceptions - Handle a single exception, handle multiple exceptions.	10
V	Visualization and File handling: The os and sys modules. Introduction to file I/O - Reading and writing text files, Manipulating binary files. NumPy - Basics, Creating arrays, Arithmetic, Slicing, Matrix Operations, Random numbers. Plotting and visualization. Matplotlib - Basic plot, Ticks, Labels, and Legends. Working with CSV files. – Pandas - Reading, Manipulating, and Processing Data.	9
Total hours		45

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
CA Exams (2 numbers)	:	10 marks each
Assignment/Project/Case study etc.	:	15 marks
Lab Work	:	10 marks
Lab Exam	:	10 marks
Total	:	60 marks

vii) CONTINUOUS ASSESSMENT EXAMINATION PATTERN

- **Two tests of 30 marks** each (2 ½ modules to be covered in each exam)
- Duration – **1.5 hours**

viii) END SEMESTER EXAMINATION PATTERN

- There will be Two parts- Part A and Part B – with a total of **40 marks**.
- Part A contains compulsory short answer questions. Part B contains long answer questions with choice.
- Duration – **2 hours**

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23HSJ1NB	PROFESSIONAL COMMUNICATION	HSC	2	0	0	2	1	2023

i) **COURSE OVERVIEW:** The objective of this course is to equip students with the necessary skills to listen, read, write, and speak so as to comprehend and successfully convey any idea, technical or otherwise, as well as give them the necessary polish to become persuasive communicators. The course aims to enhance the employability and career Skills of students and orient the students towards grooming as a professional.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Demonstrate effective language skills relevant to Engineering through writing and making presentations.	Apply
CO2	Analyze a variety of textual and audio content for specific needs.	Analyze
CO3	Evaluate a given technical/non-technical topic.	Evaluate
CO4	Create professional and technical documents.	Create
CO5	Communicate proficiently in interviews and exam situations and all social situations.	Apply

iii) **SYLLABUS**

Communication Skills: Introducing yourself and others professionally, elevator pitch, recommendation letter, e-mails, netiquettes, telephone etiquettes, demi-official letters.

Business Communication and Technical writing: Product description, narrating an incident, report writing, agenda and minutes, memo, Asking for information and giving information, explaining processes and products, giving instructions, planning a course of action.

Creative Thinking, Critical Thinking Skills and problem solving: Expressing opinion, GD, Arguing, Reading critical texts (general and academic) and summarizing, listening and responding, Negotiation strategies and decision making skills.

Presentation Skills: Oral Presentation Skills (Proposal presentation), Power point presentation (Projects).

Interviews: CVs and Resumes LinkedIN, Job application, Types of interviews, successful interviews, interview etiquette, dress code, body language, telephone/online interviews, one-to-one interview & panel interview, FAQs related to job interviews.

iv) (a) **TEXT BOOKS**

- 9) Raman Sharma, "Technical Communications", Oxford Publication, London, 2004.

v) COURSE PLAN

Module	Contents	No. of hours
I	Need for Effective Communication, Levels of communication; Flow of communication; Use of language in communication; Communication networks; Significance of technical communication, Types of barriers; Miscommunication; Noise; Overcoming measures Non-verbal Communication and Body Language: Forms of non-verbal communication; Interpreting body-language cues; Kinesics; Proxemics; Chronemics; Effective use of body language Technical Writing: Differences between technical and literary style, Elements of style; Common Errors, Letter Writing: Formal, informal and demi-official letters; business letters, Netiquettes: effective e-mail messages	9
II	Need for Creativity in the 21st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of Creativity Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.	9

	<p>Steps in problem-solving, Problem-Solving Techniques, Problem Solving through Six Thinking Hats, Mind Mapping, Forced Connections.</p> <p>Problem Solving strategies, Analytical Thinking and quantitative reasoning expressed in written form, Numeric, symbolic, and graphic reasoning, Solving application problems.</p>	
III	<p>Reading, Comprehension, and Summarizing: Reading styles, critical reading, reading and comprehending shorter and longer technical articles from journals, newspapers</p> <p>Listening Skills: Active and Passive listening, listening for general content, to fill up information, intensive listening, for specific information, to answer, and to understand.</p> <p>Developing effective listening skills, barriers to effective listening, listening to longer technical talks, listening to classroom lectures, talks on engineering /technology, listening to documentaries and making notes, TED talks. Telephone etiquettes</p>	9
IV	<p>Oral Presentation: Voice modulation, tone, describing a process, Presentation Skills: Oral presentation and public speaking skills, business presentations, Preparation: organizing the material, self-Introduction, introducing the topic, answering questions, individual presentation practice, presenting visuals effectively. Mirroring, Elevator Pitch</p> <p>Introducing Oneself -one's career goals</p>	9
V	<p>Formal writing and interview skills: Technical Writing: differences between technical and literary style. Letter Writing (formal, informal and semi formal), Job applications, Minute preparation, CV preparation (differences between Bio-Data, CV and Resume), and LinkedIn profile. Statements of Purpose, Instructions, Checklists.</p> <p>Interview Skills: types of interviews, successful interviews, interview etiquette, dress code, body language, telephone/online interviews</p>	9
Total hours		45

LAB ACTIVITIES

1. Activity: SWOT analysis
2. Activity: Creating LinkedIn profile, preparing CV, mock interview
3. Activity: Reading a technical paper and summarizing
4. Activity: Interpret data in tables and graphs

5. Activity: Writing a report
6. Activity: Oral presentation on the given topic using appropriate non-verbal cues
7. Case Analysis of a challenging scenario
8. Problem solving using mind map/six thinking hats

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
Project Report Writing	:	10 marks
Technical presentation through PPT	:	10 marks
Listening Test	:	10 marks
Group discussion/mock job interview	:	10 marks
LinkedIn submission	:	5 marks
Case study	:	20 marks
Project	:	30 marks
Total	:	100 marks

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23PYP10A	ENGINEERING PHYSICS LAB	BSC	0	0	2	0	1	2023

i) **COURSE OVERVIEW:** The aim of this course is to enable the students to gain practical knowledge in Physics to correlate with the theoretical studies. It equips the students to utilize the acquired skills in an appropriate way to explore the prospects of modern technology. It brings more confidence in students and develop the ability to fabricate engineering and technical tools.

ii) **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Determine the frequency of tuning fork using a Melde's string apparatus by setting up wave pattern in a stretched string.	Apply
CO2	Determine the Numerical aperture and acceptance angle of optical fiber.	Apply
CO3	Determine the wavelength of a monochromatic beam of light and thickness of thin wire using principle of interference	Apply
CO4	Demonstrate diffraction of light using plane transmission grating.	Apply
CO5	Draw the I-V characteristics of non ohmic devices.	Apply

iii) **SYLLABUS**

1. Melde's string apparatus- Measurement of frequency in the transverse mode.
2. Wavelength measurement of a monochromatic source of light using Newton's Rings method.
3. Determination of diameter of a thin wire or thickness of a thin strip of paper using air wedge method.
4. Measurement of wavelength of a source of light using grating.
5. Determination of dispersive power and resolving power of a plane transmission grating.
6. Determination of the wavelength of any standard laser using diffraction grating
7. I-V characteristics of solar cell.
8. To measure the Numerical aperture and acceptance angle of an optical fibre.

v) COURSE PLAN

Module	Contents	No. of hours
I	Melde's string apparatus- Measurement of frequency in the transverse mode.	2
II	Wavelength measurement of a monochromatic source of light using Newton's Rings method.	2
III	Determination of diameter of a thin wire or thickness of a thin strip of paper using air wedge method.	2
IV	Measurement of wavelength of a source of light using grating.	2
V	Determination of dispersive power and resolving power of a plane transmission grating.	2
VI	Determination of the wavelength of any standard laser using diffraction grating	2
VII	I-V characteristics of solar cell.	2
VIII	To measure the Numerical aperture and acceptance angle of an optical fibre.	1
Total hours		15
Total hours for two batches		30

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
Class work/ Assessment /Viva-voce	:	55 marks
Written Examination	:	40 marks
Total	:	100 marks

Course Code	Course Name	Category	L	T	P	J	Credit	Year of Introduction
23ESP10B	ELECTRICAL AND ELECTRONICS WORKSHOP	BSC	0	0	2	0	1	2023

i) COURSE OVERVIEW:

- To expose the students to the commonly used accessories and components in electrical installations and to provide hands on experience of wiring of electrical circuits.
- To enable the students to familiarize, identify, construct, and debug the electronic components, devices and circuits. It also enables the student's engineering skills by soldering practices of electronic circuits.

ii) COURSE OUTCOMES

After the completion of the course, the student will be able to:

CO1	Choose the appropriate tools, electrical accessories, protective elements for electrical wiring and study the different types of earthing and safety measures.	Remember
CO2	Build a simple lighting circuit for domestic buildings using suitable accessories and materials.	Apply
CO3	Identify the faults in electric circuits and batteries using appropriate devices.	Analyse
CO4	Make use of a solar powered circuit and obtain its VI characteristics.	Apply
CO5	Construct the performance characteristics of DC Motors by performing load test.	Apply
CO6	Test various electronic components.	Apply
CO7	Implement basic electronic circuits on breadboard.	Apply
CO8	Implement basic electronic circuits on general purpose PCB.	Apply

iii) SYLLABUS

Familiarization/Identification of electrical accessories and protective elements, wiring of circuits using PVC conduits, wiring of simple solar chargeable circuit and determination of its characteristics, Demonstration of power distribution arrangement and earthing schemes, Identification of different types of batteries.

Familiarization of electronic equipment and commonly used tools, Familiarization and testing of electronic components, Interconnection using bread board, Diode Characteristics,

Single stage RC coupled Amplifier, Truth table verification of Logic Gates, Soldering Practice, DC Power Supply, Inverting and Non Inverting amplifier using Op-amp.

v) COURSE PLAN

Module	Contents	No. of hours
ELECTRICAL WORKSHOP		
1	Familiarization/Identification of electrical components with specification (Functionality, type, size, colour coding, symbol, cost etc. of Wires, Cables, Connectors, Fuses, MCB, ELCB, Switches and other electrical installation equipments with ratings).	2
2	Understand the safety precautions to be observed in the workshop. Demonstration of usage of fire extinguishers and learn about basic first aid procedures.	1
3	Wiring of one lamp controlled by one SPST switch and a plug socket (PVC conduit wiring).	2
4	Wiring of light/fan circuit controlled by two SPDT switches (Staircase wiring).	2
5	Wiring of a light circuit and a power circuit for domestic applications.	2
6	Wiring of simple solar chargeable circuit and determination of its characteristics.	2
7	a) Demonstration of power distribution arrangement using single phase MCB distribution board with ELCB, main switch and Energy meter. b) Application of tester and test lamp for identifying simple faults in electrical systems.	1
8	a) Demonstration of Pipe and Plate Earthing Schemes. b) Testing of batteries using hydrometer.	1
9	Load Test on a DC Shunt/Series Motor	2

ELECTRONICS WORKSHOP		
1	Familiarization of electronic equipment and commonly used tools.	2
2	Familiarization and testing of electronic components.	2
3	Interconnection using bread board a. Diode Characteristics b. Single stage RC coupled Amplifier c. Truth table verification of Logic Gates	6
4	Soldering Practice a. DC Power Supply b. Inverting and Non Inverting amplifier using Op-amp.	5
Total hours		30

vi) CONTINUOUS ASSESSMENT EVALUATION PATTERN

Attendance	:	5 marks
Class work/ Assessment /Viva-voce	:	55 marks
Written Examination	:	40 marks
Total	:	100 marks
