PRINCIPAL'S MESSAGE

Climate Change and disaster risks are fundamental threats to sustainable development, the living and health conditions for all humans worldwide. World Environment Health Day was founded by the International Federation of Environmental Health (IFEH) in 2011 to focus on the importance of caring for the health of our environment and is being celebrated on 26 of September every year. The theme for this year is "Environmental Health: Creating Resilient Communities through Disaster Risk Reduction and Climate Change Mitigation and Adaptation." Environmental health focuses on how environmental factors affect human health and well-being. Key areas of concern include Air Quality, Water Quality, Chemical Exposure, Waste Management, and Climate Change among many others. The second International Conference on Infrastructure Development focusing on Sustainability, Resilience and Transformational Adaptation, organised by the Department of Civil Engineering, being held in the College during 25-27 September has very relevant topics addressing the contemporary issues related to the theme of World Environment Health Day for the year 2024. I am sure, the outcomes of the Conference will provide an opportunity for the government, organizations, and communities to collaborate and promote sustainable practices that can enhance both environmental and human health.

Dr. S. Viswanatha Rao
