# **Scheduling of Courses**

#### i) Knowledge Segments and Credits

Every course of B. Tech Programme is placed in one of the nine categories as listed in table below. No semester shall have more than six lecture-based courses and two laboratory courses, and/ordrawing/seminar/project courses in the curriculum.

#### Table 1: Credit distribution and the Knowledge Domains

SI. No.	Category	Category Code	Total credits
1	Humanities and Social Sciences including Management Courses	HSC	5
2	Basic Science Courses	BSC	26
3	Engineering Science Courses	ESC	22
4	Programme Core Courses, Comprehensive Course Work and Viva Voce	РСС	79
5	Programme Elective Courses	PEC	15
6	Open Elective Courses	OEC	03
7	Project Work and Seminar	PWS	10
8	Mandatory Non-credit Courses (P/F) with Grade	MNC	Non- Credit
9	Mandatory Student Activities (P/F)	MSA	2
	Total Mandatory Credits		162

#### ii)Semester-wise Credit Distribution

Semester	1			IV	V	VI	VII	VIII	Total
Credits for Courses	20	18	22	22	24	22	15	17	160
Activity Points (Min.) 40 60									100
Credits for Activities	2								2

CS2U40A	Foundations of deep learning	PCC	2	1	0	3	2022

**PRE-REQUISITE:** CS2U30C Introduction to Machine learning

#### **COURSE OVERVIEW**

This course provides the learners an overview of the concepts and algorithms involved in deep learning. The course covers the basic concepts in neural networks, deep learning, optimization techniques, regularization techniques, convolutional neural networks, recurrent neural networks, autoencoders, and generative models. The students will be able to implement deep learning algorithms to solve real-world problems.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the basic concepts of deep learning.	Understand
CO 2	Explain the deep learning techniques for structured/tabular data.	Understand
CO 3	Outline the standard regularization and optimization techniques for the effective training of deep neural networks.	Understand
CO 4	Apply convolutional Neural Network (CNN) models for different use cases.	Apply
CO 5	Explain the concepts of Recurrent Neural Network (RNN), Long Short Term Memory( LSTM), Gated Recurrent Unit (GRU).	Understand
CO 6	Explain the concepts of auto encoder, generative models, Transformers	Understand

#### SYLLABUS

The Deep Learning course provides a comprehensive understanding of deep learning architectures, and their applications. It covers fundamental concepts, including activation functions, loss functions, backpropagation, and challenges like overfitting and hyperparameter tuning. The course explores training deep models, focusing on optimization techniques (SGD, Adam), regularization methods (dropout, batch normalization), and ensemble learning. Advanced topics include Convolutional Neural Networks (CNNs) for image processing, Recurrent Neural Networks (RNNs) for sequential data, and generative models such as Autoencoders, GANs, and transformers. The course also discusses attention mechanisms and state-of-the-art architectures used in modern deep learning applications.

#### **COURSE PLAN**

Module	Contents	Hours
Ι	<b>Introduction to Deep learning and training Deep models</b> Introduction to deep learning. Deep feed forward network. Setup and initialization- Weight intializations, Vanishing and exploding gradient problems, Optimization techniques - Gradient Descent (GD), Stochastic GD, GD with momentum, GD with Nesterov momentum, AdaGrad, RMSProp, Adam., Regularization Techniques—L1 and L2 regularization, Early stopping, Dataset augmentation, Parameter sharing, Ensemble methods, Dropout, Batch normalization.	10
II	<b>Deep Learning for Structured Data</b> Introduction to Deep Learning for Structured Data. Feedforward Neural Networks (MLPs) for Tabular Data. Preprocessing techniques: feature scaling, embeddings for categorical variables. Model optimization for tabular datasets. Evaluation metrics and overfitting in tabular models. Comparison with traditional machine learning methods (e.g., Decision Trees, Random Forest, XGBoost). Hybrid Approaches: Combining Deep Learning with Classical ML models.	7
III	<b>Convolutional Neural Network-CNN</b> Convolutional Neural Networks: Basic Architecture, Convolution Operation, Motivation, 3D Convolution, Padding, Stride, Pooling. Variants of convolution functions, efficient convolution algorithms, sparse connections, and weight sharing. Training CNN, Transfer learning, Applications of Convolutional Networks, Pre-trained Convolutional Architectures : Google Net, VGG, ResNet, EfficientNet. Object detection- RCNN, YOLO.	11
IV	Sequential Models Applications of sequential models, Recurrent neural networks, LSTM, GRU. Encoder-Decoder Models. Attention Mechanism. NLP-Language Modeling (GPT, BERT) Sequence-to-Sequence Learning (Transformer models). Text Classification— Named Entity Recognition (NER), Text Embedding & Representation Learning - Word2Vec, BERT Embedding. Generative Text Models	9
V	<b>Encoder decoder models and Generative models</b> Autoencoders, Types of autoencoders: Variational Auto-Encoder, under complete auto-encoder, stochastic encoder, denoising encoder. Image Segmentation- UNet. Generative models: generative adversarial networks (GAN). Applications of GAN.	8
	Total Hours	45

# ASSESSMENT PATTERN

Continuous Assessment		
Attendance	:	10 marks
Continuous Assessment Tests	:	25 marks
Assignment	:	15 marks
Total	:	50 marks
End Semester Examination	:	100 marks

Course Code	Course Name	CATEGORY	L	Т	Р	CREDIT	YEAR OF INTRODUCTION
NCOU40A	INDUSTRIAL SAFETY ENGINEERING	MNC	2	1	0	-	2020

The course is intended to give knowledge of various safety management principles, various safety systems, various machine guarding devices, hazard identification techniques, energy sources, systems & applications and the need in the present context. Learners will be able to compare different hazard identification tools and choose the most appropriate based on the nature of industry. It aims to equip students in working with projects and to take up research work in connected areas.

# **COURSE OUTCOME**

After the completion of the course the student will be able to

Course Outcomes	Description	Level
CO1	Describe the theories of accident causation and preventive measures of industrial accidents.	Understand
CO2	Explain about personal protective equipment, its selection, safety performance & indicators and importance of housekeeping.	Understand
CO3	Explain different issues in construction industries.	Understand
CO4	Describe various hazards associated with different machines and mechanicalmaterial handling.	Understand
CO5	Utilize different hazard identification tools in different industries with theknowledge of different types of chemical hazards.	Understand

# **SYLLABUS**

**Safety introduction:** Need for safety. Safety and productivity. Definitions: Accident, Injury, Unsafe act, Unsafe Condition, Dangerous Occurrence, Reportable accidents. Safety policy. Safety Officer-responsibilities, authority. Safety committee-need, types, advantages.

**Personal protection in work environment:** Personal protection in the work environment, Types of PPEs, Personal protective equipment- respiratory and non-respiratory equipment. Standards related to PPEs. Housekeeping: 5 s of housekeeping. Work permit system- objectives, hot work and cold work permits. Typical industrial models and methodology. Entry into confined spaces.

**Safety issues in construction:** Introduction to construction industry and safety issues in construction Safety in various construction Familiarization with relevant Indian Standards and the National Building Code provisions on construction safety. Relevance of ergonomics in construction safety. Ergonomics Hazards - Musculoskeletal Disorders and Cumulative Trauma Disorders.

**Safety hazards in machines:** Machinery safeguard-Point-of-Operation, Principle of machine guarding -types of guards and devices. Safety in turning, and grinding. Welding and Cutting-Safety Precautions of Gas welding and Arc Welding. Maintenanceof common elements-wire rope, chains slings, hooks, clamps. Hearing Conservation Program in Production industries.

**Hazard identification and analysis:** Hazard and risk, Types of hazards –Classification of Fire, Types of Fire extinguishers, fire explosion and toxic gas release. Control of Chemical Hazards, Hazardous properties of chemicals, Material Safety Data Sheets (MSDS).

# **COURSE PLAN**

Module	Contents				
		hours			
Ι	Introduction to Industrial safety Engineering	9			
	Need for safety. Safety and productivity. Definitions: Accident, Injury,				
	Unsafe act, Unsafe Condition, Dangerous Occurrence. Reportable accidents,				
	Theories of accident causation. Safety organization. Role of management,				
	supervisors, workmen, unions, government and voluntary agencies in safety.				
	Safety officer-responsibilities, authority, Safety committee need, types,				
	advantages.				

II	Personal protection in the work environment	9
	Types of PPEs, respiratory and non-respiratory equipment, Standards	
	related to PPEs, Monitoring Safety Performance: Frequency rate, severity	
	rate, Monitoring Safety Performance: incidence rate, activity rate.	
	Housekeeping: Responsibility of management and employees. Advantages	
	of good housekeeping. 5 s of housekeeping, Work permit system-	
	objectives, hot work and cold work permits, Typical industrial models and	
	methodology. Entry into confinedspaces, Types of PPEs, respiratory and	
	non-respiratory equipment.	
III	Introduction to construction industry and safety	9
	Excavation and filling – Under-water works – Under-pinning & Shoring,	
	Ladders & Scaffolds – Tunneling, Blasting –Demolition – Confined space,	
	Familiarization with relevant Indian Standards and the NationalBuilding	
	Code provisions on construction safety. Relevance of ergonomics in	
	construction safety. Ergonomics Hazards, Musculoskeletal Disorders and	
	Cumulative Trauma Disorders.	
IV	Machinery safeguard	9
	Point-of-Operation. Principle of machine guarding. Types of guards and	
	devices. Safety in Power Presses, primary & secondary operations –	
	shearing-bending - rolling – drawing. Safety in turning, boring, milling,	
	planning and grinding. Welding and Cutting-Safety Precautions of Gas	
	welding and Arc Welding, Cutting and Finishing. Material Handling-	
	Classification-safety consideration- manual and mechanical handling.	
	Handling assessments and techniques- lifting, carrying, pulling, pushing,	
	palletizing and stocking. Material Handling equipment-operation &	
	maintenance.	
	Maintenance of common elements-wire rope, chains slings, hooks, clamps	
V	Hazard identification	9
	Hazard and risk. Types of hazards – Classification of Fire. Types of Fire	
	extinguishers fire, explosion and toxic gas release. Inventory analysis, Fire	
	and explosion hazard rating of process plants, The Dow Fire and Explosion	
	Hazard Index. Preliminary hazard analysis, Hazard and Operability study	
	(HAZOP). Chemical hazard- Classifications, Control of Chemical Hazards.	
	Hazardous properties of chemicals. Material Safety Data Sheets (MSDS).

Course Code	Course Name	Category	L	Т	Р	Cre dit	Year of Introduction
CS2U48A	Deep Learning Lab	PCC	0	0	3	2	2022

This course aims to introduce the learner to an overview of the concepts and algorithms involved in deep learning. Basic concepts and application areas of machine learning, deep networks, convolutional neural networks, and recurrent neural networks are covered in this course. This is a foundational program that will help students understand the capabilities, challenges, and consequences of deep learning and prepare them to participate in the development of leading-edge AI technology. They will be able to gain the knowledge needed to take a definitive step in the world of AI.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Implement basic neural networks and CNN on standard datasets.	Apply
CO 2	Apply the impact of optimization algorithms, weight initialization strategies, dropout, and regularization techniques on deep learning model performance	Apply
CO 3	Apply object detection techniques using YOLO and Faster R-CNN architectures.	Apply
CO 4	Implement models for sequential data processing	Apply
CO 5	Implement auto encoders and GAN on standard datasets and analyze the performance.	Apply
CO 6	Implement and fine-tune transformer-based models like BERT for natural language processing tasks,	Apply

#### **TEXT BOOKS**

- 1. Ian Goodfellow, Yoshua Bengio, and Aaron Courville, Deep Learning, MIT Press, 2016.

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U49A	SEMINAR	PWS	0	0	3	2	2020

The course 'Seminar' is intended to enable a B.Tech graduate to read, understand, present and prepare report about an academic document. The learner shall search in the literature including peer reviewed journals, conference, books, project reports etc., and identify an appropriate paper/thesis/report in her/his area of interest, in consultation with her/his seminar guide. This course can help the learner to experience how a presentation can be made about a selected academic document and also empower her/him to prepare a technical report.

#### **COURSE OUTCOMES**

After successful completion of the course, the students will be able to:

Course		
Outcomes	Description	Level
CO1	Identify academic documents from the literature which are related to	Apply
	her/his areas of interest.	
	Read and apprehend an academic document from the literature which	Analyze
CO2	is related to her/ his areas of interest	
	Prepare a presentation about an academic document	Create
CO3		
	Give a presentation about an academic document	Apply
CO4		
CO5	Prepare a technical report.	Create

#### **General Guidelines**

- The Department shall form an Internal Evaluation Committee (IEC) for the seminar with academic coordinator for that program as the Chairperson/Chairman and seminar coordinator & seminar guide as members. During the seminar presentation of a student, all members of IEC shall be present.
- Formation of IEC and guide allotment shall be completed within a week after the End Semester examination (or last working day) of the previous semester.
- > Guide shall provide required input to their students regarding the selection of topic/ paper.
- Choosing a seminar topic: The topic for a UG seminar should be current and broad based rather than a very specific research work. It's advisable to choose a topic for the Seminar to be closely linked to the final year project area. Every member of the projectteam could choose or be assigned Seminar topics that covers various aspects linked to the Project area.
- ▶ A topic/paper relevant to the discipline shall be selected by the student during the semester break.
- > Topic/Paper shall be finalized in the first week of the semester and shall be submitted to the IEC.

- > The IEC shall approve the selected topic/paper by the second week of the semester.
- Accurate references from genuine peer reviewed published material to be given in the report and to be verified.

#### **EVALUATION PATTERN**

#### Total marks: 100, only CIE, minimum required to pass 50

Seminar Guide: 20 marks (Background Knowledge -10 (The guide shall give deserving marks for a candidate based on the candidate's background knowledge about the topic selected), Relevance of the paper/topic selected -10).

Seminar Coordinator: 20 marks (Seminar Diary -10 (Each student shall maintain a seminar diary and the guide shall monitor the progress of the seminar work on a weekly basis and shall approve the entries in the seminar diary during the weekly meeting with the student), Attendance -10).

**Presentation:** 40 marks to be awarded by the IEC (Clarity of presentation – 10, Interactions – 10 (to be based on the candidate's ability to answer questions during the interactive session of her/his presentation), Overall participation – 10 (to be given based onher/his involvement during interactive sessions of presentations by other students), Quality of the slides – 10).

**Report:** 20 marks to be awarded by the IEC (check for technical content, overall quality, templates followed, adequacy of references etc.).

Course Code	Course Name	Category	L	Τ	Р	CREDIT	Year of Introduction
CS2U49B	PROJECT PHASE I	PWS	0	0	6	2	2020

The course 'Project Work' is mainly intended to evoke the innovation and invention skills in a student. The course will provide an opportunity to synthesize and apply the knowledge and analytical skills learned, to be developed as a prototype or simulation. The project extends to 2 semesters and will be evaluated in the 7<sup>th</sup> and 8<sup>th</sup> semester separately, based on the achieved objectives. One third of the project credits shall be completed in 7<sup>th</sup> semester and two third in 8<sup>th</sup> semester. It is recommended that the projects may be finalized in the thrust areas of the respective engineering stream or as interdisciplinary projects. Importance should be given to address societal problems and developing indigenous technologies.

# **COURSE OUTCOMES**

After successful completion of the course, the students will be able to:

Course Outcomes	Description	Level
CO1	Model and solve real world problems by applying knowledge across domains	Apply
CO2	Develop products, processes or technologies for sustainable and socially relevant applications	Apply
CO3	Function effectively as an individual and as a leader in diverse teams and to comprehend and execute designated tasks .	Apply
CO4	Plan and execute tasks utilizing available resources within timelines, following ethical and professional norms.	Apply
CO5	Identify technology/research gaps and propose innovative/creative solutions.	Analyze
CO6	Organize and communicate technical and scientific findings effectively in written and oral forms .	Apply

#### Phase 1 Target

- Literature study/survey of published literature on the assigned topic
- Formulation of objectives
- Formulation of hypothesis/ design/ methodology
- ▶ Formulation of work plan and task allocation.
- Block level design documentation
- Seeking project funds from various agencies
- Preliminary Analysis/Modeling/Simulation/Experiment/Design/Feasibility study
- Preparation of Phase 1 report

#### **Evaluation Guidelines & Rubrics**

Total: 100 marks (Minimum required to pass: 50 marks).

- Project progress evaluation by guide: 30 Marks.
- > Interim evaluation by the Evaluation Committee: 20 Marks.
- Final Evaluation by the Evaluation Committee: 30 Marks.

Project Phase - I Report (By Evaluation Committee): 20 Marks

(The evaluation committee comprises HoD or a senior faculty member, Project coordinator and project supervisor).

#### **PROGRAM ELECTIVE 2**

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U41A	Big data Analytics	PEC	2	1	0	3	2022

#### **COURSE OVERVIEW**

This course is offered to introduce fundamental algorithmic ideas in processing data. The preliminary concepts of Hadoop and Map Reduce are included as part of this course.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course	Course Outcomes	Level
Outcomes		
CO1	Explain the key concepts of data science.	Understand
000	Describe big data and use cases from selected business	Understand
02	domains.	
CO3	Explain the process of big data analytics using Hadoop and	Understand
COS	related tools such as Pig and Hive.	
CO4	Apply R programming to conduct basic data analysis on simple	Apply
CU4	datasets.	
CO5	Apply different machine learning approaches to process data and	Apply
COS	interpret the principles of supervised and unsupervised learning.	

#### SYLLABUS

Introduces the fundamentals of data science and big data, covering key concepts such as the data science process, project stages, and big data characteristics (the five V's). It explores tools and technologies like Hadoop, HDFS, MapReduce, Pig, Hive, and offers a brief overview of NoSQL. Students will learn basic data analysis using R, including data types, descriptive statistics, visualization, and exploratory analysis. The course also introduces machine learning concepts, including regression, classification, clustering, model validation, and performance metrics.

# **COURSE PLAN**

Module	Contents	Hours
I	Data science in a big data world: Benefits and uses of data science and big data Facets of data-the big data ecosystem and data science-Data science process- roles-stages in data science project- Defining research goals-Retrieving data- Cleansing, integrating, and transforming data- Data Exploration-Data modelling - Presentation and automation.	8
п	Big Data Overview-the five V's of big data-State of the Practice in Analytics Examples of Big Data Analytics-Apache Hadoop and the Hadoop Ecosystem- HDFS-Design of HDFS, HDFS Concepts-Daemons-Reading and Writing Data- Managing File system Metadata- Map Reduce-The Stages of Map Reduce - Introducing Hadoop Map Reduce Daemons-YARN	10
III	Analyzing the Data with Hadoop using Map and Reduce-Developing a Map Reduce Application-Anatomy of a Map Reduce Job- Scheduling-Shuffle and Sort - Task execution. Big data Management Tools: PIG-: Introduction to PIG, Execution Modes of Pig, Pig Latin, HIVE: Hive Architecture, HIVEQL, Introduction to NoSQL. (Introduction only)	9
IV	Review of Basic Analytic methods using R- Introduction to R -Data Import and Export -Attribute and Data Types - ordered and unordered factors-arrays and matrices lists and data frames -Descriptive Statistics-Exploratory Data Analysis-Dirty Data Visualizing a Single Variable-Examining Multiple Variables-statistical models in R-Graphical Procedures-High-level plotting commands-Low-level plotting commands.	9
V	Machine learning -Introduction to Machine Learning, Examples of Machine Learning applications-Supervised Learning- Regression – Single variable, Multi variable Classification – Logistic Regression- Unsupervised Learning - Clustering: K-means Reinforcement Learning-Model Selection and validation- k-Fold Cross Validation-Measuring classifier performance- Precision, recall.	9
	Total Hours	45

#### ASSESSMENT PATTERN

Continuous Assessment						
Attendance	:	10 marks				
Continuous Assessment Tests	:	25 marks				
Assignment	:	15 marks				
Total	:	50 marks				
End Semester Examination	:	100 marks

CS2U41B	Social network Analysis	PEC	2	1	0	3	2022

This course explores the evolution, structure, and applications of social networks in the context of the Semantic Web. It covers fundamental concepts such as social network analysis, ontology-based knowledge representation, and community detection and mining methods. The course also delves into understanding human behavior in social communities, trust and privacy issues in online networks, and various graph-theoretic approaches for analyzing and visualizing social networks. Through theoretical foundations and practical applications, students will gain insights into how social networks function and evolve in a digital environment.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course	Course Outcomes	Level
Outcomes		
CO1	Explain the concept of semantic web and related	Understand
COI	applications.	
CO2	Explain knowledge representation using ontology.	Understand
	Explain the evolution, detection, and characterization of	Understand
CO3	communities in social networks using various methods and	
	tools.	
CO4	Explain human behavior in the social web and related	Understand
04	communities.	
CO5	Apply graph theory for visualization of social networks.	Apply

#### **SYLLABUS**

Introduction to the Semantic Web, fundamentals of social network analysis, key measures, electronic discussion networks, blogs, and web-based networks. Role of ontologies in the Semantic Web, ontology-based knowledge representation, ontology languages (RDF, OWL).Web community evolution, detecting and evaluating social network communities, methods and tools for community detection, decentralized online social networks, and multi-relational community characterization.Human behavior in social communities, Graph theory concepts, hybrid visualizations, and applications in social and collaboration networks.

#### TEXTBOOKS

COURSE	PLAN

Module	Contents	Hour s
I	Introduction to Semantic Web: Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Social Network analysis: Development of Social Network Analysis – Key concepts and measures in network analysis – Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities – Web-based networks – Applications of Social Network Analysis.	9
П	Ontology and their role in the Semantic Web: Ontology-based knowledge Representation – Ontology languages for the Semantic Web: Resource Description Framework – Web Ontology Language – Modelling and aggregating social network data: State-of-the-art in network data representation – Ontological representation of social individuals – Ontological representation of social relationships – Aggregating and reasoning with social network data – Advanced representations.	10
III	Extracting evolution of Web Community from a Series of Web Archive – Detecting communities in social networks – Definition of community – Evaluating communities – Methods for community detection and mining – Applications of community mining algorithms – Tools for detecting communities social network infrastructures and communities – Decentralized online social networks – Multi-Relational characterization of dynamic social network communities.	9
IV	Understanding and predicting human behavior for social communities – User data management – Inference and Distribution – Enabling new human experiences – Reality mining – Context – Awareness – Privacy in online social networks – Trust in online environment – Trust models based on subjective logic – Trust network analysis – Trust transitivity analysis – Combining trust and reputation – Trust derivation based on trust comparisons – Attack spectrum and counter measures.	8
V	Graph theory – Centrality – Clustering – Node-Edge Diagrams – Matrix representation – Visualizing online social networks, visualizing social networks with matrix-based representations – Matrix and Node-Link Diagrams – Hybrid representations – Applications – Cover networks – Community welfare – Collaboration networks – Co- Citation networks.	9
	Total Hours	45

#### ASSESSMENT PATTERN

Continuous Assessment							
Attendance	:	10 marks					
Continuous Assessment Tests	:	25 marks					
Assignment	:	15 marks

End Semester Examination	:	100 marks					

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U41C	DATA MINING	PEC	2	1	0	3	2022

This course helps the learner to understand the concepts of data mining and data warehousing. It covers the key processes of data mining, data preprocessing techniques, fundamentals and advanced concepts of classification, clustering, association rule mining, web mining and text mining. It enables the learners to develop new data mining algorithms and apply the existing algorithms in real-world scenarios.

#### **COURSE OUTCOMES**

After the completion of the course the student will be able to

CO1	Explain data mining and data warehousing concepts in application domains.	Understand
CO2	Make use of appropriate preprocessing techniques to convert raw data into suitable format for practical data mining tasks	Apply
CO3	Apply classification and clustering algorithms in various domains.	Apply
CO4	Make use of association rule mining techniques in various applications.	Apply
COs	Explain advanced data mining concepts and their applications in emerging domains	Understand

#### SYLLABUS

Introduction to Data Mining and Data Warehousing, Data Preprocessing: Data Reduction-Data cube aggregation, Attribute subset selection, Dimensionality reduction, Numerosity reduction, Discretization and concept hierarchy generation. Advanced classification and Cluster analysis: Classification- Introduction, Decision tree construction principle, Splitting indices ,Classification Accuracy-Precision, Recall. Clustering Paradigms, Partitioning Algorithm- PAM, Hierarchical Clustering-DBSCAN, Categorical Clustering-ROCK. Association Rule Analysis: Apriori(Level-wise algorithm), Partition Algorithm, Pincer Search Algorithm, Dynamic Itemset Counting Algorithm, FP-tree Growth Algorithm Web Mining. Text Mining

Course Code	Course Name	Catego ry	L	Т	Р	Credit	Year of Introduction
CS2U41D	AI for Health Care	PEC	2	1	0	3	2022

The objective of this course is to help the learners to understand how AI and machine learning techniques are transforming healthcare delivery, clinical decision-making, and biomedical research. The course will cover topics such as machine learning algorithms, deep learning architectures, natural language processing, and computer vision, with a focus on their applications in medical imaging, diagnostics, patient management, and personalized medicine. This course enables the learners to explore the opportunities and challenges of integrating AI into healthcare systems.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the principles of AI, machine learning, and deep learning in the context of healthcare applications.	Understand
CO 2	Apply Machine Learning in developing AI models for Medical Data Analysis and Predictions.	Apply
CO 3	Apply Deep Learning for medical image analysis.	Apply
CO 4	Apply natural language processing (NLP) techniques to extract insights from electronic health records (EHRs), clinical notes, and research papers.	Apply
CO 5	Explain emerging AI technologies in healthcare, their ethical implications, regulatory challenges, and future trends.	Understand

#### SYLLABUS

The AI in Healthcare course provides a comprehensive understanding of how Artificial Intelligence, Machine Learning, Deep Learning, and Natural Language Processing (NLP) are applied in the medical field. It covers fundamental AI concepts, predictive modelling for disease diagnosis, deep learning for medical imaging, and NLP techniques for analysing electronic health records (EHRs) and clinical notes. The course also explores emerging AI technologies, including AI-driven personalized medicine, robotic surgeries, and blockchain for secure medical data management. Ethical considerations, regulatory frameworks (HIPAA, GDPR, FDA), and future trends are discussed to ensure responsible AI implementation. Through hands-on projects, students gain practical experience in developing AI solutions for real-world healthcare challenges.

CS2U41E	Game Theory in Artificial Intelligence	PEC	2	1	0	3	2022

This course provides a comprehensive introduction to Game Theory and its applications in Artificial Intelligence (AI). It explores fundamental game-theoretic principles such as Nash equilibrium, decision-making strategies, multi-agent interactions, and reinforcement learning in game environments. The course emphasizes both theoretical concepts and practical implementations, enabling students to apply game-theoretic approaches in AI-driven decision-making, robotics, cybersecurity, and economic model

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
outcomes		
CO1	Explain the fundamental concepts of game theory and its relevance to AI	Understand
CO2	Explain different types of games and equilibria used in AI.	Understand
CO3	Explain the foundational concepts in mechanism design and social choice theory	Understand
CO4	Apply the principles of VCG mechanisms and optimal mechanism design to problems such as combinatorial allocations, Internet advertising, and single- and multi-agent auctions	Apply
CO5	Apply game theory concepts in AI applications such as economics, robotics, and cybersecurity.	Apply

#### SYLLABUS

Fundamentals of Game Theory and its applications in Artificial Intelligence (AI), focusing on strategic decision-making in multi-agent systems. Key topics include types of games, Nash equilibrium, Minimax strategies, Bayesian games, and mechanism design, VCG Mechanism and AI applications in Game theory

#### TEXTBOOKS

- 1 Martin Osborne, An Introduction to Game Theory, Cambridge University Press, I<sup>st</sup> Edition, 2004

#### COURSE PLAN

Module	Contents	Hours
Ι	Introduction to Game Theory - Competitive equilibrium, Rationality; Strategic Games - Dominance, Nash equilibrium, Maxmin strategies, elimination of dominated strategies, preservation of pure Nash equilibrium (PSNE), matrix games, relation between maxmin and PSNE in matrix games Mixed strategies, mixed strategy Nash equilibrium (MSNE), finding MSNE, MSNE characterization theorem, algorithm to find MSNE	9
II	Correlated equilibrium (CE) - Computing CE, extensive form games,	9
	subgame perfection, limitations of subgame perfect Nash equilibrium;	
	Imperfect information extensive form games (IIEFG) - strategies in	
	IIEFGs, equivalence of strategies in IIEFGs, perfect recall, Equilibrium	
	in IIEFG; Game theory application - P2P file sharing; Bayesian games -	
	strategy and utility in Bayesian games, equilibrium in Bayesian games.	
III	Introduction to mechanism design - revelation principle, introduction and	9
	proof of Arrow's impossibility result, introduction to social choice setup;	
	Introduction and proof of Gibbard-Satterthwaite theorem, domain	
	restriction, median voter theorem; Task sharing domain, uniform rule,	
	mechanism design with transfers, examples of quasi-linear preferences,	
	Pareto optimality and Groves payments	
IV	Introduction to VCG mechanism-VCG in Combinatorial allocations,	9
	applications to Internet advertising, slot allocation and payments in	
	position auctions, pros and cons of VCG mechanism; Affine maximizers,	
	single object allocation, Myerson's lemma, optimal mechanism design;	
	Single and multi-agent optimal mechanism design, examples of optimal	
	mechanisms	
V	AI Applications of Game Theory: AI in Economics: Pricing, Market Equilibria, and Auctions, Game Theory for AI Security and Cybersecurity,AI for Social Good: Fairness and Ethics in AI ,Game Theory in Autonomous Vehicles and Robotics , Future Trends: AI- driven Decision Systems and Strategic Thinking	9
	Total Hours	45

# ASSESSMENT PATTERN

# **Continuous Assessment**

Continuous Assessment Tests	:	25 marks
Attendance	:	10 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS1U41F	NATURAL LANGUAGE PROCESSING	PEC	2	1	0	3	2020

This course enables the learners to understand the concepts of Natural Language Processing. The course covers basic pre-processing steps, language models, text classification using machine learning algorithms, information and relation extraction methods, Information Retrieval, Question Answer Systems and Machine Translation models. This course enables the students to apply techniques and methods to solve challenging real-world problems in NLP.

#### **COURSE OUTCOMES**

After the completion of the course the student will be able to

Course Outcomes	Description	Level
CO1	Summarize basic concepts and learning methods for NLP	Understand
CO2	Demonstrate the relevance of pre-processing methods on text data.	Apply
CO3	Compare different language modelling techniques.	Apply
CO4	Make use of NLP techniques in Text Classification and Information Retrieval	Apply
CO5	Explain Information Extraction, Relation Detection, QA Systems and Machine Translation.	Understand

#### **SYLLABUS**

**Introduction to NLP:** NLP Tasks and Applications, Language-Building Blocks, Challenges of NLP, Machine Learning for NLP – Naïve Bayes Classifier, Logistic Regression, Support Vector Machines, Approaches to NLP-- Heuristics-Based NLP, Machine Learning-based NLP.
**Pre-processing and Representation Models:** NLP System Pipeline--Steps--Data Acquisition, Text Extraction and Clean-up, Pre-processing, Feature Engineering, Modelling, Evaluation, Post-Modelling Phases.Text Representation--Vector Space Models--Basic Vectorization Approaches--One-Hot Encoding, Bag of Words, Bag of N-Grams TF-IDF; Distributed Representations-- Word Embeddings, Doc2Vec.

**Classification and Information Extraction:** Text Classification--Text classification applications – Pipeline for building text classification systems, Naïve Bayes for Sentiment Classification – Naïve Bayes Classifier Training –Optimizing for Sentiment Analysis, Logistic Regression, Support Vector Machine for Text Classification.Information Extraction(IE)—IE Applications – The General Pipeline for IE - Named Entity Recognition(NER), Ambiguity in Named Entity Recognition – NER as Sequence Labeling –Evaluation of NER.

**Relation Detection and Information Retrieval:** Relation Detection and Classification – Supervised Learning Approaches to Relation Analysis –Lightly Supervised Approaches to Relation Analysis – Evaluation of Relation Analysis systems.Information Retrieval – Term weighting and document scoring – Inverted Index – Evaluation of Information Retrieval Systems.

**QA Systems and Machine Translation:** Question-Answering Systems – Factoid Question Answering – Question Processing – Passage Retrieval – Answer Processing – Evaluation of Factoid Answers.Machine Translation – Why Machine Translation is Hard – Classical Machine Translation – Direct Translation – Transfer – Statistical Machine Translation- The Phrase based Translation model – Alignment in MT – Training Alignment Models – Symmetrizing Alignments for Phrase-based MT – Decoding for Phrase-based Statistical MT

CS2U41F	Cloud Data Management	PEC	2	1	0	3	2022

This course covers core principles of cloud data management and examines both current and emerging systems. Topics include modern data processing paradigms, commercial platforms, and open-source NoSQL databases. Students will also explore efforts to classify and benchmark these systems.

#### COURSE OUTCOMES

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the fundamentals of cloud computing and data management architectures.	Understand
CO 2	Explain cloud storage technologies and distinguish between SQL and NoSQL data models in the cloud.	Understand
CO 3	Implement big data solutions integrated with cloud services.	Apply
CO 4	Explain security, privacy, and compliance issues in cloud data environments.	Understand

#### SYLLABUS

Evolution and characteristics of cloud computing, Cloud storage types, Big data characteristics and architecture, security concerns in cloud environments, Security concerns in cloud environments, Serverless data processing.

#### **TEXT BOOKS**

- 1. Thomas Erl, "Cloud Computing: Concepts, Technology & Architecture", Prentice Hall, 2013.
- 2. Dan C. Marinescu, "Cloud Computing: Theory and Practice", 2nd Edition, Morgan Kaufmann, 2017.
- 3. Martin Kleppmann, "Designing Data-Intensive Applications", O'Reilly Media, 2017.
- 4. Rajkumar Buyya et al., "Mastering Cloud Computing", McGraw Hill Education, 2013.
- 5. AWS / Azure / Google Cloud Official Documentation & Whitepapers (especially useful for hands-on labs and real-world insights)

#### **COURSE PLAN**

Module
--------

I	Evolution and characteristics of cloud computing, Cloud service models (IaaS, PaaS, SaaS), Cloud deployment models (Public, Private, Hybrid, Community), Introduction to cloud data lifecycle, Overview of leading cloud platforms (AWS, Azure, GCP).	8
П	Cloud storage types: Object, Block, and File storage, Data durability, consistency, and availability, Relational databases in the cloud (Amazon RDS, Cloud SQL), Introduction to NoSQL databases (MongoDB, DynamoDB, Cassandra), Data sharding, replication, and scaling in cloud systems.	10
III	Big data characteristics and architecture, Map Reduce, Hadoop ecosystem and integration with cloud, Apache Spark on AWS EMR / Dataproc, Real- time data processing with Kafka, AWS Kinesis, Data lakes and data warehouses (Redshift, BigQuery, Snowflake).	10
IV	Security concerns in cloud environments, Data encryption: At rest and in transit, Identity and Access Management (IAM), Regulatory compliance: GDPR, HIPAA, ISO/IEC 27001, Cloud backup and disaster recovery strategies.	9
v	Serverless data processing (AWS Lambda, Azure Functions), Edge computing and IoT data management, Multi-cloud and hybrid-cloud strategies.	8
	Total Hours	45

Course Code	Course Name	Category	L	Т	Р	Credi t	Year of introduction
CS0U41A	INTRODUCTION TO MOBILE COMPUTING	OEC	2	1	0	3	2022

The purpose of this course is to prepare learners to understand the functionalities and design considerations of mobile computing. The course content is designed to cover the mobile computing architecture, features of different communication systems and major elements of mobile security and next generation computer systems. This course enables the learners to acquire advanced concepts on mobile and ad-hoc networks.

## **COURSE OUTCOMES**

Course Outcomes	Description	Level
CO1	Describe the mobile computing applications, services, design considerations and architectures	Understan d
CO2	Identify the technology trends for cellular wireless networks .	Understan d
CO3	Summarize the Short Messaging Service and General Packet Radio Service	Understan d
CO4	Outline the LAN technologies used in mobile communication.	Understan d
CO5	Describe the security protocols and apply suitable security algorithm to secure the communication .	Apply
CO6	Explain the fundamental concepts of next generation mobile networks.	Understa nd

After the completion of the course the student will be able to

## **SYLLABUS**

**Mobile Computing Architecture:** Introduction to mobile computing – Functions, Devices, Middleware and gateways, Applications and services, Limitations. Mobile computing architecture – Internet: The ubiquitous network, Three-tier architecture, Design considerations for mobile computing.

**Communication Systems:** Mobile computing through telephony - Evolution of telephony, Multiple access procedures - Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA), Space Division Multiple Access (SDMA). Satellite communication systems – Basics, Applications, Geostationary Earth Orbit (GEO), Low Earth Orbit (LEO), Medium Earth Orbit (MEO), Satellite phones. Mobile computing through telephone – Interactive Voice Response (IVR) architecture, Overview of voice software, Developing an IVR application. Global System for Mobile Communication (GSM) - Introduction, Architecture, Entities, Call routing, Mobility management, Frequency allocation, Authentication and security.

**Short Messaging Service and General Packet Radio Service:** Short Message Service (SMS) – Strengths, Architecture, Value added services, Accessing the SMS bearer. General Packet Radio Service (GPRS) – Architecture, Network operations, Data services, Applications, Limitations, Billing and charging.

**Wireless Local Area Networks:** Wireless Local Area Network (WLAN) - Advantages, Evolution, Applications, Architecture, Mobility, Security, Deploying WLAN. Wireless Local Loop (WLL) – Architecture. High Performance Radio Local Area Network (HIPERLAN). WiFi Vs 3G.

**Mobile Security and Next Generation Networks:** Security issues in mobile computing - Information security, Security techniques and algorithms, Security protocols. Next generation networks – The Converged Scenario, Narrowband to broadband, Orthogonal Frequency Division Multiplexing (OFDM), Multi Protocol Label Switching (MPLS), Wireless Asynchronous Transfer Mode (WATM), Multimedia broadcast services.

Module	Contents	No.of
		Hours
1	Mobile Computing Architecture	9
	Introduction to mobile computing – Functions, Devices,	
	Middleware and gateways, Applications, services, limitations,	
	Internet: The ubiquitous network, Three-tier architecture (Lecture	
	1), Three-tier architecture (Lecture 2), Design considerations for	
	mobile computing (Lecture 1), Design considerations for mobile	
	computing (Lecture 2)	

2	Communication Systems	9
	Evolution of telephony, Multiple access procedures –FDMA,	
	TDMA, CDMA, SDMA, Satellite communication systems – GEO,	
	MEO, LEO, Satellite phones, Interactive Voice Response (IVR)	
	architecture, Overview of voice software, Developing an IVR	
	application (Call flow diagram), Introduction to	
	GSM, Architecture, GSM entities, Call routing, Mobility	
	management, Frequency allocation, Authentication and security	
3	Short Messaging Service and General Packet Radio Service	9
	SMS Strengths, Architecture, Short Message Mobile Terminated	
	(SM MT) and Short Message Mobile Originated (SM MO)	
	messages, SMS Architecture - Operator-centric pull, operator-	
	independent push/pull, Value added services, Accessing the SMS	
	bearer (Lecture 1), Accessing the SMS bearer (Lecture 2), GPRS	
	architecture, Network operations	
	Data services, Applications, Limitations, Billing and charging	
4	Wireless Local Area Networks	9
	WLAN Advantages, Evolution, Applications, WLAN Architecture	
	(Lecture 1), WLAN Architecture (Lecture 2)	
	Mobility, Security, Deploying WLAN, WLL Architecture,	
	HIPERLAN, WiFi Vs 3G	
5	Mobile Security and Next Generation Networks	9
	Information security – Attacks, Components, Security techniques	
	and algorithms – Stream Vs Block cipher, Symmetric Vs	
	Asymmetric cryptography, Security techniques and algorithms –	
	RSA, Diffie Hellman Key exchange, Security protocols – Secure	
	Socket Layer, Transport Layer Security, Wireless Transport Layer	
	Security, The Converged Scenario, Narrowband to broadband,	
	Orthogonal Frequency Division Multiplexing (OFDM) and Multi	
	Protocol Label Switching (MPLS), Wireless Asynchronous	
	Transfer Mode (WATM) and Multimedia broadcast services	45

Course Code	Course Name	Catego ry	L	Т	Р	Credit	Year of Introduction
CS0U41B	Introduction to deep learning	OEC	2	1	0	3	2022

This course aims to introduce the learner to an overview of the concepts and algorithms involved in deep learning. Basic concepts and application areas of machine learning, deep networks, convolutional neural network and recurrent neural network are covered in this course. This is a foundational program that will help students understand the capabilities, challenges, and consequences of deep learning and prepare them to participate in the development of leading-edge AI technology. They will be able to gain the knowledge needed to take a definitive step in the world of AI.

## **COURSE OUTCOMES**

After the completion of the course the student will be able to

Course Outcom	Description	Level
es		
CO1	Demonstrate basic concepts in machine learning.	Understand
CO2	Illustrate the validation process of machine learning models using hyper-parameters and validation sets.	Understand
CO3	Demonstrate the concept of the feed forward neural network and its training process.	Apply
CO4	Build CNN and Recurrent Neural Network (RNN) models for different use cases.	Apply
CO5	Use different neural network/deep learning models for practical applications.	Apply

## SYLLABUS

**Introduction:** Key components - Data, models, objective functions, optimization algorithms, Learning algorithms. Supervised learning- regression, classification, tagging, web search, page ranking, recommender systems, sequence learning, Unsupervised learning, Reinforcement learning, Historical Trends in Deep Learning. Other Concepts - overfitting, underfitting, hyperparameters and validation sets, estimators, bias and variance.

**Optimization and Neural Networks:** Neural Networks –Perceptron, Gradient Descent solution for Perceptron, Multilayer perceptron, activation functions, architecture design, chain rule, back propagation, gradient based learning. Introduction to optimization–Gradient based optimization, linear least squares. Stochastic gradient descent, Building ML algorithms and challenges.

**Convolutional Neural Network:** Convolutional Neural Networks – convolution operation, motivation, pooling, Convolution and Pooling as an infinitely strong prior, variants of convolution functions, structured outputs, data types, efficient convolution algorithms.

**Recurrent Neural Network:** Recurrent neural networks – Computational graphs, RNN design, encoder – decoder sequence to sequence architectures, deep recurrent networks, recursive neural networks, modern RNNs LSTM and GRU, Practical use cases for RNNs.

**Application Areas:** Applications – computer vision, speech recognition, natural language processing. Research Areas – Autoencoders, Representation learning, Boltzmann Machines, Deep belief networks.

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS0U41C	COMPUTER GRAPHICS	OEC	2	1	0	3	2020

This course helps the learners to make awareness about strong theoretical concept in computer graphics. It covers the three-dimensional environment representation in a computer, transformation of 2D/3D objects and basic mathematical techniques and algorithms used to build applications. This course enables the learners to develop the ability to create image processing frameworks for different domains and develop algorithms for emerging display technologies.

## **COURSE OUTCOMES**

Course	Description	Level
Outcomes		
	Describe the working principles of graphics devices.	Understand
CO1		
	Illustrate line drawing, circle drawing and polygon filling	Apply
CO2	algorithms.	
CO3	Demonstrate geometric representations and transformations on 2D	Apply
	& 3D objects	
CO4	Demonstrate the working of line and polygon clipping algorithms	Apply
CO5	Summarize visible surface detection methods and illustrate	Apply
	projection algorithms.	

After the completion of the course the student will be able to

#### **SYLLABUS**

**Basics of Computer Graphics:** Basics of Computer Graphics and its applications. Video Display devices- Refresh Cathode Ray Tubes(CRT), Random Scan Displays and systems, Raster scan displays and systems, Color CRT displays, Flat panel display and its categories.

**Line drawing, Circle drawing and Filled Area Primitives:** Line drawing algorithms- DDA, Bresenham's algorithm. Circle drawing algorithms- Midpoint Circle generation algorithm, Bresenham's algorithm. Filled Area Primitives- Scan line polygon filling, Boundary filling and flood filling.

**Geometric transformations:** Two dimensional transformations -Translation, Rotation, Scaling, Reflection and Shearing, Composite transformations, Matrix representations and homogeneous coordinates. Basic 3D transformations.

**Clipping:** Window to viewport transformation. Cohen Sutherland and Midpoint subdivision line clipping algorithms, Sutherland Hodgeman and Weiler Atherton Polygon clipping algorithms.

**Three dimensional graphics:**Three dimensional viewing pipeline. Projections- Parallel and Perspective projections. Visible surface detection algorithms- Back face detection, Depth buffer algorithm, Scan line algorithm, A buffer algorithm

Course Code	Course Name	Catego ry	L	Т	Р	Credit	Year of Introduction
CS0U41D	Python for Engineers	OEC	2	1	0	3	2022

The objective of the course is to provide learners with an insight into Python programming in a scientific computation context and develop programming skills to solve engineering problems. It covers programming environment, important instructions, data representations, intermediate level features, Object Oriented Programming and file data processing of Python. This course lays the foundation to scientific computing, develop web applications, Machine Learning, and Artificial Intelligence-based applications and tools, Data Science and Data Visualization applications.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Write, test and debug Python programs	Apply
CO 2	Illustrate uses of conditional (if, if-else, if-elif- else and switch-case) and iterative (while and for) statements in Python programs.	Understand
CO 3	Develop programs by utilizing the modules Lists, Tuples, Sets and Dictionaries in Python	Apply
CO 4	Implement Object Oriented programs with exception handling	Apply
CO 5	Analyze, Interpret, and Visualize data according to the target application	Apply
CO 6	Develop programs in Python to process data stored in files by utilizing the module Numpy.	Apply

#### SYLLABUS

Getting Started with Python Programming- Functions and Python Data Structures- Object Oriented Programming)- Visualization and File handling- Scientific Computing

#### **TEXT BOOKS**

- 1. Kenneth A Lambert., Fundamentals of Python : First Programs, 2/e, Cengage Publishing, 2016
- 2. David J. Pine, Introduction to Python for Science and Engineering, CRC Press, 2021

#### REFERENCES

<b>COURSE PL</b>	AN
------------------	----

Module	Contents	Hours
I	Getting Started with Python Programming - Running code in the interactive shell, Editing, Saving, and Running a script. Using editors - IDLE, Jupyter. Basic coding skills - Working with data types, Numeric data types and Character sets, Keywords, Variables and Assignment statement, Operators, Expressions, Working with numeric data, Type conversions, Comments in the program, Input Processing, and Output, Formatting output. How Python works. Detecting and correcting syntax errors. Using built in functions and modules in math module. Control statements - Selection structure - if-else, if-elif-else. Iteration structure - for, while. Testing the control statements. Lazy evaluation.	9
п	Functions - Hiding redundancy and complexity, Arguments and return values, Variable scopes and parameter passing, Named arguments, Main function, Working with recursion, Lambda functions. Strings - String function. Lists - Basic list Operations and functions, List of lists, Slicing, Searching and sorting list, List comprehension. Work with tuples. Sets. Dictionaries - Dictionary functions, dictionary literals, adding and removing keys, accessing and replacing values, traversing dictionaries, reverse lookup.	9
ш	Design with classes - Objects and Classes, Methods, Instance Variables, Constructor, Accessors and Mutators. Structuring classes with Inheritance and Polymorphism. Abstract Classes. Exceptions - Handle a single exception, Handle multiple exceptions.	9
IV	Plotting - An Interactive Session with PyPlot, Basic Plotting, Logarithmic Plots, More Advanced Graphical Output, Plots with multiple axes, Mathematics and Greek symbols, The Structure of matplotlib, Contour and Vector Field Plots. File Processing - The os and sys modules, Introduction to file I/O, Reading and writing text files, Working with CSV files.	9
V	Numerical Routines. SciPy and NumPy - Basics, Creating arrays, Arithmetic, Slicing, Matrix Operations, Special Functions, Random Numbers, Linear Algebra, Solving Nonlinear Equations, Numerical Integration, Solving ODEs. Data Manipulation and Analysis – Pandas : Reading Data from Files Using Pandas, Data Structures: Series and DataFrame, Extracting Information from a DataFrame, Grouping and Aggregation.	9
	Total Hours	45

### ASSESSMENT PATTERN

#### **Continuous Assessment**

End Semester Examination		100 marks
Total	:	50 marks
Assignment	:	15 marks
Continuous Assessment Tests	:	25 marks
Attendance	:	10 marks

Course Code	Course Name	Category	L	T	Р	Credit	Year of Introduction
CS0U41E	Object Oriented Concepts	OEC	2	1	0	3	2022

The purpose of this course is to enable learners to solve problems by breaking it down to object level while designing software and to implement it using Java. This course covers Object Oriented Principles, Object Oriented Programming in Java, Exception handling, Event handling, multithreaded programming and working with window-based graphics. This course provides learners the basics to develop Mobile applications, Enterprise Applications, Scientific Applications and Web based Applications.

## **COURSE OUTCOMES**

After the completion of the course the student will be able to

Course	Description			
Outcome				
S				
CO1	Develop Java programs using the object-oriented concepts - classes, objects, constructors, data hiding, inheritance and polymorphism.	Apply		
CO2	Utilize data types, operators, control statements, built in packages & interfaces, Input/output Streams and Files in Java to develop programs .	Apply		
CO3	Illustrate how robust programs can be written in Java using exception handling mechanism	Apply		
CO4	Develop application programs in Java using multithreading.	Apply		
CO5	Develop Graphical User Interface based application programs by utilizing event handling features and Swing in Java	Apply		

## **SYLLABUS**

**Object Orientation and Java basics:** Object Orientation Principles – Object and Class, Data abstraction and Encapsulation, Inheritance, Polymorphism, Dynamic binding, Message communication, Benefits of using Object orientation.Introduction to Java - Java programming Environment and Runtime Environment, Development Platforms -Standard, Enterprise. Java Virtual Machine (JVM), Java compiler, Bytecode, Java applet, Java Buzzwords, Java program structure, Comments, Garbage Collection, Lexical Issues.Primitive Data types - Integers, Floating Point Types, Characters, Boolean. Literals, Type Conversion and Casting, Variables, Arrays, Strings, Vector class.

**Core Java Fundamentals:** Operators - Arithmetic Operators, Bitwise Operators, Relational Operators, Boolean Logical Operators, Assignment Operator, Conditional (Ternary) Operator, Operator Precedence.

Control Statements - Selection Statements, Iteration Statements and Jump Statements. Object Oriented Programming in Java - Class Fundamentals, Declaring Objects, Object Reference, Introduction to Methods, Constructors, *this* Keyword, Method Overloading, Using Objects as Parameters, Returning Objects, Recursion, Access Control, Static Members, Command-Line Arguments, Variable Length Arguments.

**More features of Java:** Inheritance - Super Class, Sub Class, The Keyword *super*, protected Members, Calling Order of Constructors, Method Overriding, the Object class, Abstract Classes and Methods, Using *final* with Inheritance.Packages and Interfaces - Defining Package, CLASSPATH, Access Protection, Importing Packages, Interfaces.Exception Handling - Checked Exceptions, Unchecked Exceptions, *try* Block and *catch* Clause, Multiple *catch* Clauses, Nested *try* Statements, *throw, throws* and *finally*.

Advanced features of Java:Input/Output - I/O Basics, Reading Console Input, Writing Console Output, PrintWriter Class, Reading and Writing Files.Java Library - String Handling – String Constructors, String Length, Special String Operations -Character Extraction, String Comparison, Searching Strings, Modifying Strings, Using valueOf(), Comparison of String Buffer and String.

**GUI Programming, Event Handling and Multithreaded Programming:** Multithreaded Programming - The Java Thread Model, The Main Thread, Creating Thread, Creating Multiple Threads, Suspending, Resuming and Stopping Threads.Event Handling - Event Handling Mechanisms, Delegation Event Model, Event Classes, Sources of Events, Event Listener Interfaces, Using the Delegation Model.Swing Fundamentals - Swing Key Features, Model View Controller (MVC), Swing Controls, Components and Containers, Exploring Swing - JFrame, JLabel, JButton, JTextField.

## **TEXT BOOKS**

CS0M 49A	MINI PROJECT	CATEGOR Y	L	Т	Р	CREDIT	YEAR OF INTRODUCTION
		PWS	0	1	6	4	2020

The objective of this course is to apply the fundamental concepts of different courses learned in respective Minor Streams: Software Engineering, Machine Learning and Networking. This course helps the learners to get an exposure to the development of application software/hardware solutions/ software simulations in the field of Computer Science and Engineering. It enables the learners to understand the different steps to be followed such as literature review and problem identification, preparation of requirement specification & design document, testing, development and deployment. Mini project enables the students to boost their skills, widen the horizon of thinking and their ability to resolve real life problems.

## **COURSE OUTCOMES**

After the completion of the course the student will be able to

Course Outcomes	Description				
CO1	Identify technically and economically feasible problems	Apply			
CO2	Identify and survey the relevant literature for getting exposed to related solutions.	Apply			
CO3	Perform requirement analysis, identify design methodologies and develop adaptable & reusable solutions of minimal complexity by using modern tools & advanced programming techniques	Apply			
CO4	Prepare technical report and deliver presentation	Apply			
CO5	Apply engineering and management principles to achieve the goal of the project	Apply			

## **COURSE PLAN**

Students are expected to follow the following steps.

- 1. Review of Literature and Identification of a problem
- 2. Create an abstract with a problem statement, solution approach, technology stack, team, etc.
- 3. Create Requirements Specification
- 4. Create Design Document . This may include designs like,
  - a. System Architecture Design
  - b. Application Architecture Design
  - c. GUI Design
  - d. API Design
  - e. Database Design
  - f. Technology Stack
- 5. Deployment, Test Run & Get Results
- 6. Prepare Project Report

# Semester VIII

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U40B	Generative AI	PCC	2	1	0	3	2022

The Generative AI (GenAI) syllabus covers the key concepts, models, and tools behind AI systems that create new content, such as text, images, audio, and code. It begins with foundational knowledge of classical AI and machine learning, providing context for how GenAI differs in its goal to generate rather than just predict or classify. Students explore foundational language models like GPT, BERT, and T5, learning how these models are trained and applied in real-world tasks. Retrieval-Augmented Generation (RAG), a technique that enhances GenAI outputs with up-to-date or domain-specific information from external sources. **P**rompt engineering—designing effective inputs to steer model outputs. Through hands-on practice and conceptual learning, the syllabus aims to equip students with the skills to build, evaluate, and apply GenAI systems responsibly and creatively across different domains.

#### ii) COURSE OUTCOMES

After the completion of the course, the student will be able to:

CO1	Understand the principles and concepts behind generative AI models	Undersatnd
CO2	Apply different architectures used in large language models.	Apply
CO3	Develop the ability to explore and analyze word embeddings, perform vector arithmetic to investigate word relationships, visualize embeddings using dimensionality reduction techniques	Apply
<b>CO4</b>	Apply the fundamentals of Stable Diffusion and other generative tools to create images and videos	Apply
CO5	Apply prompt engineering skills to real-world scenarios, such as information retrieval, text generation.	Apply

#### iii) SYLLABUS

Overview of Classical Machine Learning and Artificial Intelligence

Difference between Gen AI and other types of AI, advantages, and disadvantages of Gen AI technologies Foundational Language Models Retrieval Augmented Generation RAG Frame work Generative Text and Speed Models Generative Image models Prompt Engineering

#### iv) a) TEXTBOOKS

- 1. Modern Generative AI with ChatGPT and OpenAI Models: Leverage the Capabilities of OpenAI's LLM for Productivity and Innovation with GPT3 and GPT4, by Valentina Alto, Packt Publishing Ltd, 2023.
- Generative AI for Cloud Solutions: Architect modern AI LLMs in secure, scalable, and ethical cloud environments, by Paul Singh, Anurag Karuparti ,Packt Publishing Ltd, 2024

CS2U40C	COMPREHENSIVE COURSE VIVA	PCC	1	0	0	1	2022

The objective of this Course viva is to ensure the basic knowledge of each student in the most fundamental core courses in the curriculum. The viva voce shall be conducted based on the core subjects studied from third to eighth semester. This course helps the learner to become competent in placement tests and other competitive examinations.

#### Guidelines

- 1. The course should be mapped with a faculty and classes shall be arranged for practicing questions based on the core courses listed in the curriculum.
- 2. The viva voce will be conducted by the same three member committee assigned for final project phase II evaluation. It comprises of Project coordinator, expert from Industry/research Institute and a senior faculty from a sister department.
- 3. The pass minimum for this course is 25.
- 4. The mark will be treated as internal and should be uploaded along with internal marks of other courses.
- 5. Comprehensive Viva should be conducted along with final project evaluation by the three member committee.

#### **Mark Distribution**

Total marks: 50, only CIE, minimum required to pass : 25

Course Code	Course Name	CATEGORY	L	Т	Р	CREDIT	YEAR OF INTRODUCTION
CS2U49C	PROJECT PHASE II	PWS	0	0	12	4	2022

The course 'Project Work' is mainly intended to evoke the innovation and invention skills in a student. The course will provide an opportunity to synthesize and apply the knowledge and analytical skills learned, to be developed as a prototype or simulation. The project extends to 2 semesters and will be evaluated in the 7th and 8th semester separately, based on the achieved objectives. One third of the project credits shall be completed in 7th semester and two third in 8th semester. It is recommended that the projects may be finalized in the thrust areas of the respective engineering stream or as interdisciplinary projects. Importance should be given to address societal problems and developing indigenous technologies.

#### **COURSE OUTCOMES**

After successful completion of the course, the students will be able to:

CO1	Model and solve real world problems by applying knowledge across domains	Apply
CO2	Develop products, processes or technologies for sustainable and socially relevant applications	Apply
CO3	Function effectively as an individual and as a leader in diverse teams and to comprehend and execute designated tasks	Apply
CO4	Plan and execute tasks utilizing available resources within timelines, following ethical and professional norms	Apply
CO5	Identify technology/research gaps and propos innovative/creative solutions	Analyze
CO6	Organize and communicate technical and scientific findings effectively in written and oral forms	Apply

#### Phase 2

#### **TARGETS:**

- In depth study of the topic assigned in the light of the report prepared under Phase I;
- Review and finalization of the approach to the problem relating to the assigned topic.
- Preparing a detailed action plan for conducting the investigation, including teamwork.
- Detailed Analysis/ Modeling / Simulation/ Design/ Problem Solving/Experiment as needed.
- Final development of product/ process, testing, results, conclusions and future directions.
- Preparing a paper for Conference Presentation/ Publication in Journals, if possible.
- Presenting projects in Project Expos conducted by the University at the cluster level and/ or state level as well as others conducted in India and abroad.
- Filing Intellectual Property Rights (IPR) if applicable.
- Preparing a report in the standard format for being evaluated by the Department Assessment Board.
- Final project presentation and viva voce by the assessment board including the external expert.

#### **Evaluation Guidelines & Rubrics**

Total: 150 marks (Minimum required to pass: 75 marks).

- Project progress evaluation by guide: 30 Marks.
- Two interim evaluations by the Evaluation Committee: 50 Marks (25 marks for each evaluation).
- Final evaluation by the Final Evaluation committee: 40 Marks
- Quality of the report evaluated by the evaluation committee: 30 Marks

(The evaluation committee comprises HoD or a senior faculty member, Project coordinator and project supervisor. The final evaluation committee comprises of Project coordinator, expert from Industry/research/academic Institute and a senior faculty from a sister department)

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U42A	AI for Cyber Security	PEC	2	1	0	3	2022

Machine Learning (ML) is increasingly used in sensitive and time-critical systems such as autonomous driving, cyber physical systems etc. to deliver higher performance and protect the confidentiality of the systems. Though ML based systems can be used to classify various malware attacks and develop intrusion detection systems, these systems are also susceptible to several adversarial attacks. This course covers a systematic approach on developing ML based cybersecurity methodologies. It will also cover adversarial attacks which intentionally forces ML systems to behave unexpectedly. To understand AI & CS systems are being trained to identify malware, execute pattern recognition

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Summarize the main methods used in artificial intelligence (AI) and Cyber security.	Understand
CO 2	Develop ML models to classify malwares.	Apply
CO 3	Develop Time series model and deep learning for malware detection	Apply
CO 4	Demonstrate the vulnerabilities in ML systems and state methods to address adversarial attacks.	Understand

#### SYLLABUS

Basics of supervised, unsupervised, and reinforcement learning. Overview on Machine Learning with use cases from cybersecurity, classification of threats, attacks, vulnerabilities, malware, trojans etc. Classification of malware using supervised/unsupervised learning based on signatures and profiling. Decision Tree and context based malicious event detection. Time Series Analysis and Ensemble modelling to detect deviation from normal behaviour, case studies in Reconnaissance detection. Efficient Network Anomaly detection; familiarize with various stages of network attack and address using deep neural networks, develop intrusion detection systems. Adversarial attacks on ML systems, model poisoning, black box attacks, white box attacks, state-of-art research paper reading on deep learning systems.

#### **TEXT BOOKS**

- 1. Hands-on Machine Learning for Cyber Security by Soma Halder, ISBN139781788992282
- 2. Cryptography and Network Security by Principles and Practice , Stallings William,(2017), Pearson Publication

#### REFERENCES

1. Machine Learning and Security by David Freeman, Clarence Chio Publisher: O'Reilly Media, Inc. Release Date: February 2018 ISBN: 9781491979891

2. Malware Data Science by Joshua Saxe with Hillary Sanders, ISBN-10: 1-59327-859-4 ISBN-13: 978-1-59327-859-5 Publisher: William Pollock

#### **COURSE PLAN**

Module	Contents	Hours
I	Overview on Machine Learning (ML) - Basics of supervised, unsupervised, and reinforcement learning. Use cases from cybersecurity, classification of threats, attacks, vulnerabilities, malware, trojans etc.	9
II	Classification of malware using supervised/unsupervised learning based on signatures and profiling. Decision Tree and context based malicious event detection.	9
III	Time Series Analysis and Ensemble modelling to detect deviation from normal behaviour, case studies in Reconnaissance detection.	9
IV	Efficient Network Anomaly detection; familiarize with various stages of network attack and address using deep neural networks, develop intrusion detection systems.	9
V	Adversarial attacks on ML systems, model poisoning, black box attacks, white box attacks, state-of-art research paper reading on deep learning systems.	9
	Total Hours	45

#### ASSESSMENT PATTERN

Continuous Assessment						
Attendance	:	10 marks				
Continuous Assessment Tests	:	25 marks				
Assignment	:	15 marks				
Total	:	50 marks				
End Semester Examination		100 marks				

Course Code	Course Name	Category	L	Т	Р	Credit	Year of introduction
CS2U42B	Web Intelligence and Big Data	PEC	2	1	0	3	2022

**Pre-requisite**: 23CSL20A Data Structures

#### **COURSE OVERVIEW**

This course introduces the foundational and advanced concepts of Web Intelligence and Big Data Analytics. It focuses on AI techniques applied at web scale, data mining from web resources, and analysis using distributed computing tools. Learners will explore real-world applications such as sentiment analysis, natural language processing, recommendation systems, and scalable data analytics using technologies like MapReduce, NoSQL databases, and stream processing.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Explain the principles and architecture of Web Intelligence and Big Data platforms	Understand
CO2	Apply data mining and machine learning algorithms for web- based applications	Apply
CO3	Develop scalable data solutions using distributed systems and MapReduce.	Apply
CO4	Apply and visualize streaming data for real-time decision making.	Apply
CO5	Develop Big Data solutions for various application domains.	Apply

#### SYLLABUS

Web Intelligence: Concepts and Applications, Big Data characteristics – volume, variety, velocity, Evolution of Web Intelligence, Search engines and Web crawling, Inverted indexing and document retrieval, Memory-efficient indexing, Natural language understanding.

MapReduce programming model, Hadoop ecosystem, Parallelization and scalability, Data storage- HDFS, GFS. Introduction to NoSQL databases (MongoDB, Cassandra), Data locality and task scheduling, Sentiment and opinion mining from web content, Real-time processing of web streams, Stream computing engines (Apache Storm, Flink, Spark Streaming).

Classification and clustering on web-scale datasets, Logic-based reasoning and its limitations, Dealing with uncertainty- probabilistic models, Bayesian learning, Applications in recommendation and personalization.

#### TEXTBOOKS

- 1. Jure Leskovec, Anand Rajaraman, Jeff Ullman, Mining of Massive Datasets, 3rd Edition, Cambridge University Press, 2020
- 2. Tom White, Hadoop: The Definitive Guide, 4th Edition, O'Reilly Media, 2015

3. Charu C. Aggarwal, Web Data Mining: Exploring Hyperlinks, Contents, and Usage Data, 2nd Edition, Springer, 2011

## **COURSE PLAN**

Module	Contents	No. of hours
I	Web Intelligence- Concepts and Applications, Big Data characteristics – volume, variety, velocity, Evolution of Web Intelligence, Big Data architecture, AI at web-scale, Case study-Online Advertising, NLP, Recommendation Systems.	8
.II	Search engines and Web crawling, Inverted indexing and document retrieval, Memory-efficient indexing. Natural language understanding- syntax, semantics, information extraction.	9
III	MapReduce programming model, Hadoop ecosystem, Parallelization and scalability, Data storage- HDFS, GFS. Introduction to NoSQL databases (MongoDB, Cassandra). Data locality and task scheduling.	9
IV	Sentiment and opinion mining from web content- Real-time processing of web streams, Stream computing engines (Apache Storm, Flink, Spark Streaming), Case studies- Social media analytics.	10
V	Web usage and content mining-Classification and clustering on web-scale datasets, Logic-based reasoning and its limitations, Dealing with uncertainty-probabilistic models, Bayesian learning, Applications in recommendation and personalization.	9
	Total	45 hours

#### ASSESSMENT PATTERN

#### **Continuous Assessment**

Attendance	: 10 marks
Continuous Assessment Te	ests : 25 marks
Assignment	: 15 marks
Total	: 50 marks
End Semester Examination	: 100 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U42C	COGNITIVE MODELLING	PEC	2	1	0	3	2022

The objective of this course is to explain the basic cognitive processes of perception, thinking, problem solving, decision making, and moving in the environment and how these processes interact. The course focuses on developing and testing computational models of cognitive processes. This course provides students an elementary introduction to the basic methods used to develop and test computational models of cognition. It provides a presentation of psychological, mathematical, statistical, and computational methods used in different areas of cognitive modeling. Students taking this course would understand detailed examples of these methods in a variety of modeling areas that include recognition, categorization, decision making, and learning.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain cognitive modeling principles and their practical applications.	Understand
CO 2	Develop skills to qualitatively compare different models of category learning, assessing them based on their ability to generalize, memory efficiency, learning speed, and accuracy.	Apply
CO 3	Illustrate various parameter estimation techniques.	Understand
CO 4	Explain cognitive models using AIC, BIC, cross-validation, and generalization.	Understand
CO 5	Describe the fundamental principles of Instance-Based Learning (IBL), and the concept of Similarity-based Learning.	Understand

#### SYLLABUS

Introduction to Cognitive Modeling - Cognitive models, Qualitative Model Comparison, Basic Parameter Estimation Techniques, Application to Choice and Response Time Measures (Signal detection task, Quantitative Model Comparison, Connectionist versus Rational Approaches, Casebased reasoning.

#### **COURSE PLAN**

Module	Contents	Hours
Ι	<b>Introduction to Cognitive Modeling</b> - Cognitive models, Advantages of cognitive models, Practical uses of cognitive models, Steps involved in cognitive modeling. Familiarization with cognitive modeling software tools.	9
II	<b>Qualitative Model Comparison</b> - Category learning experiment, Two models of category learning, Qualitative comparisons of Models, Matlab Simulation of qualitative model.	9
ш	<b>Basic Parameter Estimation Techniques</b> - Linear and Nonlinear parameter estimation, Retention Experiment and Model, Aggregate modeling versus individual modeling, Objective function and searching for optimal parameters Application to Choice and Response Time Measures (Signal detection task; Dynamic signal detection model; parameter estimation; goodness of fit; lack of fit tests)	9
IV	<b>Quantitative Model Comparison</b> - Maximum likelihood estimation, Bechara's Simulated Gambling Task (BSGT), Three Cognitive Models on BSGT, Parameter estimation, Quantitative model comparisons using AIC and BIC, Cross-validation, and Generalization.	9
V	<b>Connectionist versus Rational Approaches</b> - (Rational) Instance-based Learning (Instances; K-nearest neighbor learning; Case-based reasoning; Similarity; Activation), (Connectionist) Neural Networks(neural networks, Rescorla-wagner/delta rule, Multi-layer feed forward networks, Relative theoretical merits of either approach	9
	Total Hours	45

#### **ASSESSMENT PATTERN**

Continuous Assessment		
Attendance	:	10 marks
Continuous Assessment Tests	:	25 marks
Assignment	:	15 marks
Total	:	50 marks
End Semester Examination	:	100 marks

Course Code	Course Name	Categor y	L	Т	Р	Credit	Year of Introduction
CS2U42D	Image and Video Analytics	PEC	2	1	0	3	2022

Image and Video Analytics starts with image acquisition using sensors like CCD or CMOS, with storage in formats such as JPEG or PNG using color models like RGB. Images are represented as 2D or 3D arrays of pixel values. Image transforms like Fourier or DCT highlight features and aid in compression and enhancement. Spatial domain methods adjust pixel values directly, while frequency domain techniques modify image details through transform coefficients. Segmentation divides images into regions using methods like thresholding or edge detection, and morphological processing (e.g., dilation, erosion) refines shapes. Video processing involves capturing, analyzing, and compressing frames for efficient playback

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Summarize different methods for image acquisition, storage and representation in digital devices and computers.	Understand
CO 2	Make use of various image transforms in representing, highlighting, and modifying image features.	Apply
CO 3	Apply the mathematical principles of digital image enhancement in spatial domain and frequency domain	Apply
CO4	Outline the various methods for segmenting and morphological processing of images	Understand
CO5	Explain the fundamental concepts in video processing pipeline	Understand

#### SYLLABUS

Image processing techniques – enhancement – restoration – segmentation - morphological image processing and video processing.

#### **TEXT BOOKS**

## COURSE PLAN

Module	Contents	Hours
I	Introduction to Digital image processing & Applications: Elements of visual perception, Components of image processing systems, sampling, quantization, Mach band effect, Basic relationship between pixels, color image fundamentals-RGB-HIS models	8
II	Image transforms: Two dimensional transforms, orthogonal and unitary transforms, 2D DFT, 2D DCT, Hadamard Transform, walsh transform	7
III	Image Enhancement in spatial and frequency domain Point operations- Clipping and Thresholding, Digital Negative. Intensity Level Slicing, Bit Extraction, Range Compression + (Work out problems), Spatial Operations-Fundamentals of spatial convolution and correlation, Spatial averaging and spatial Low pass filtering, Median Filtering, Unsharp masking Basics of Filtering in Frequency Domain, Smoothing Frequency Domain Filters: Ideal Low Pass Filter; Gaussian Low Pass Filter; Butterworth Low Pass Filter, Sharpening Frequency Domain Filters: Ideal High Pass Filter; Gaussian High Pass Filter; Butterworth High Pass filter	11
IV	<b>Image Segmentation:</b> Pixel based and region based methods. <b>Morphological image processing</b> : Erosion and dilation, Opening or closing, HIT or MISS transformation, Basic morphological algorithms.	9
V	<b>Introduction to video processing</b> : Motion Detection and Estimation, Motion estimation algorithms, Video Enhancement and Restoration. Basics of video compression standards – MPEG4.	10
	Total Hours	45

# ASSESSMENT PATTERN

Continuous Assessment		
Attendance	:	10 marks
Continuous Assessment Tests	:	25 marks
Assignment	:	15 marks
Total	:	51 marks
End Semester Examination		100 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS1U42G	COMPUTER VISION	РЕС	2	1	0	3	2022

Computer vision is a field of artificial intelligence (AI) that enables computers and systems to derive meaningful information from digital images, videos and other visual inputs. The curriculum covers the basics of image formation, key computer vision concepts, methods, techniques, pattern recognition, various problems in designing computer vision and object recognition systems. This course enables the learners to understand the fundamentals of computer vision and develop applications in computer vision.

#### **COURSE OUTCOMES:**

After the completion of the course, the student will be able to

CO1	Summarize basic concepts, terminology, theories, models and methods in the field of computer vision.	Understand
CO2	Explain basic methods of computer vision related to multi-scale representation, edge detection, detection of other primitives, stereo, motion and object recognition.	Understand
CO3	Describe principles of Segmentation, Motion Segmentation and Classification.	Understand
CO4	Select appropriate object Tracking and detection methods for computer vision applications	Understand
CO5	Implement a computer vision system for a specific problem	Apply

Syllabus

#### Module – 1 (Image Formation and Filtering)

Geometric Camera Models - Pinhole perspective, Intrinsic and Extrinsic Parameters, Geometric Camera Calibration. Linear Filters- Linear Filters and Convolution, Shift Invariant Linear Systems. Filters as Templates - Normalized Correlation and Finding Patterns.

#### Module - 2(Local Image Features and Stereo Vision)

Image Gradients - Computing the Image Gradient, Gradient Based Edge and Corner Detection. Stereopsis- Binocular Camera Geometry, Epipolar Constraint, Binocular Reconstruction, Local Methods for Binocular Fusion, Global Methods for Binocular Fusion.

#### Module - 3 (Segmentation)

Segmentation - Background subtraction, Interactive segmentation, Forming image regions. Segmentation by clustering - Watershed Algorithm. Motion Segmentation by Parameter Estimation-Optical Flow and Motion, Flow Models, Motion Segmentation with Layers.

#### Module- 4 (Classification and Tracking)

Classification - Classification Basics, Two-class and Multiclass classifiers, Error, Overfitting and Regularization, Cross Validation, Classifying Images of Single Objects.Tracking - Tracking Basics, Simple Tracking Strategies, Tracking by detection, Tracking Linear Dynamical models with Kalman filters.

#### Module - 5 (Finding Objects and other Applications)

Object detection - The Sliding Window Method. Object Recognition -Goals of Object Recognition System. Applications - Robot Navigation by stereo vision, Face detection, Face recognition, Activity
# Recognition, Tracking people. **TEXT BOOKS**

### **PROGRAM ELECTIVE 4**

#### **COURSE OVERVIEW**

This course provides an overview of Human-Computer Interaction (HCI), with an understanding of user interface design in general. The course covers topics which include user-centered design, human cognitive and physical abilities, prototyping and evaluation techniques, graphical design fundamentals and emerging areas of HCI research including mobile interaction, augmented-reality and ubiquitous computing. This course helps the learners to design and evaluate interactive systems by following the fundamental principles of human-computer interaction.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Course Description		
CO 1	Demonstrate the usability based on a variety of classic universal user-centric models.	Understand	
CO 2	Summarize the different interaction styles and the methodologies for designing interactive systems.	Understand	
CO 3	Interpret the core and complex user experience design issues.	Understand	
CO 4	Identify the evaluation methodologies of interactive system design.	Apply	
CO 5	Make use of the different contexts and suggest suitable designs for applications related to web, mobile and wearable computing.	Apply	

#### **SYLLABUS**

Human-Computer Interaction (HCI) focuses on designing interactive systems that enhance user experience through understanding user cognition, ergonomic principles, and user-centered approaches. It emphasizes usability goals, universal usability for diverse users—including older adults, children, and those with disabilities—and addresses cultural and personality differences. HCI integrates guidelines, principles, and design theories alongside frameworks, prototyping methods, and interaction styles like direct manipulation, immersive environments, and expressive human-command languages. It also explores models of collaboration, system response times, frustrating experiences, and information search strategies. Cognitive models such as GOMS help in understanding user behavior, while various evaluation methods, including usability testing and heuristic evaluation, ensure design effectiveness. Furthermore, HCI encompasses the development of apps and websites, considering information architecture and social media integration, and extends into collaborative environments, AI interface agents, and pervasive technologies like mobile and wearable computing, emphasizing smart materials and material design for seamless user interaction.

CS2U43B	Deep learning for signal and image processing	PEC	2	1	0	3	2022

PRE-REQUISITE: CS2U30C Introduction to Machine learning

## **COURSE OVERVIEW**

This course provides the learners an overview of the concepts and algorithms involved in deep learning and their application for signal and image processing. The course covers the basic concepts in neural networks, deep learning, image and signal processing fundamentals, convolutional neural networks, recurrent neural networks, autoencoders, and generative models. The students will be able to implement deep learning algorithms to solve real-world problems.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the basic concepts of signal and image processing	Understand
CO 2	Apply convolutional neural networks (CNNs) for image processing tasks	Apply
CO 3	Apply 1D Convolutional Neural Networks and Recurrent Neural Networks (RNNs) for signal processing	Apply
CO 4	Explain the concepts of auto encoder, generative models, Transformers.	Understand

# SYLLABUS

Deep learning for signal and image processing leverages neural network architectures particularly convolutional neural networks (CNNs), recurrent networks (RNNs), and transformers—to automatically learn hierarchical representations from raw data, enabling advanced feature extraction, denoising, classification, and reconstruction tasks. In signal processing, deep learning enhances traditional methods by improving performance in areas like speech recognition, biomedical signal analysis, and wireless communication through end-to-end learning. In image processing, it powers state-of-the-art techniques in object detection, segmentation, super-resolution, and image synthesis. Its ability to learn from large-scale datasets without manual feature engineering makes deep learning a transformative tool across domains where signals and images are key data modalities.

#### **COURSE PLAN**

Module	Contents	Hours
1	<b>Signal Processing Essentials:</b> Basics of Digital Signal Processing Sampling and Aliasing. Fourier Transform and Frequency Domain Analysis Short-Time Fourier Transform (STFT).Spectrograms and Time-Frequency Representations. Use of Signal Processing Techniques for Image & Video Analysis. Introduction to 1D and 2D Convolution.	7
2	<b>Image Processing Essentials</b> : Introduction to Image processing and applications. Image as 2D data. Grayscale, Binary, and Color Image Representation. Image Histograms and Contrast Enhancement. Histogram Equalization . Image Smoothing and Noise Reduction Techniques. Edge Detection (Sobel, Prewitt, Canny). Morphological Operations (Erosion, Dilation, Opening, Closing. Basic Spatial Filtering.	10
3	<b>Deep Learning for Image Processing</b> : Convolutional Neural Networks: Basic Architecture, Convolution Operation, Motivation, 3D Convolution, Variants of convolution functions, efficient convolution algorithms, sparse connections, and weight sharing. Training CNN, Transfer learning, Applications of Convolutional Networks for image and signal data, Pre- trained Convolutional Architectures : AlexNet, ZFNet, Google Net, VGGnet- 19, ResNet50.	10
4	<b>Deep Learning for Signal Processing</b> : 1D CNNs for Signal Classification. Recurrent neural networks for sequential data. RNN design. Encoder – decoder sequence to sequence architectures. Language modeling example of RNN. Deep recurrent networks. Challenges of training Recurrent Networks. Variants of RNNs : LSTM and GRU. Casestudy: Audio classification using spectrograms.	9
5	Advanced Models & Applications: Transformers and Self-Attention. Vision Transformers (ViT), Video Vision Transformers (ViViT), Audio Transformers. Generative Models: GANs for Image and Audio generation. Encoder- Decoder Models. Auto-encoders, types of autoencoders. Autoencoders for image reconstruction.	9

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U43C	Artificial Intelligence for Robotics	PEC	2	1	0	3	2022

This objective of this course is to study the use of AI in robotics, focusing on intelligent agents, problem-solving, planning, reasoning under uncertainty, and machine learning. It also covers robotic perception, localization, mapping, control, and addresses ethical issues in AI-driven robotics.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain appropriate AI methods to solve a given problem	Understand
CO 2	Apply suitable AI techniques to represent and structure a given problem within relevant frameworks.	Apply
CO 3	Apply appropriate learning methods used in Artificial Intelligence to given scenarios or problems.	Apply
CO 4	Design and perform an empirical evaluation of different algorithms on a problem formalization	Apply
CO 5	Illustrate the applications of AI in Robotic Applications.	Understand

## SYLLABUS

This course explores the integration of Artificial Intelligence in Robotics, covering intelligent agents, problem-solving through search, logic-based knowledge representation, and planning techniques. It includes reasoning under uncertainty using probabilistic models like HMM's and Kalman filters, and introduces learning methods such as statistical and reinforcement learning. The course also addresses robotic perception, localization, mapping, motion planning, control, and concludes with ethical considerations in AI-driven robotics.

## **COURSE PLAN**

Module	Contents	Hours
I	Introduction: Need for AI in Robotics. Thinking and acting humanly, intelligent agents, structure of agents. Problem Solving : Solving problems by searching –Informed search and exploration–Constraint satisfaction problems– Adversarial search, knowledge and reasoning–knowledge representation – first order logic	9
II	Planning: Planning with forward and backward State space search – Partial order planning – Planning graphs– Planning with propositional logic – Planning and acting in real world.	9
ш	Reasoning: Uncertainty – Probabilistic reasoning–Filtering and prediction–Hidden Markov models–Kalman filters– Dynamic Bayesian Networks, Speech recognition, making decisions	9
IV	Learning : Forms of learning – Knowledge in learning – Statistical learning methods –reinforcement learning, communication, perceiving and acting, Probabilistic language processing, and perception	9
V	AI In Robotics : Robotic perception, localization, mapping- configuring space, planning uncertain movements, dynamics and control of movement, Ethics and risks of artificial intelligence in robotics.	9
	Total Hours	45

Continuous Assessment		
Attendance	:	10 marks
Continuous Assessment Tests	:	25 marks
Assignment	:	15 marks
Total	:	50 marks
End Semester Examination	:	100 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U43D	DATA PRE- PROCESSING AND FEATURE ENGINEERING	PEC	2	1	0	3	2022

This course provides a comprehensive foundation in preparing and transforming raw data into meaningful inputs for machine learning and data analysis. Starting from fundamental data cleaning to advanced feature engineering and automation techniques, learners will explore practical methods and tools used in real-world data-driven projects.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Identify the types and quality of data, and apply appropriate preprocessing techniques to handle missing, noisy, and inconsistent data.	Apply
CO 2	Perform data transformation, scaling, and encoding operations to prepare raw data for effective machine learning model integration.	Apply
CO 3	Evaluate and apply feature selection techniques to reduce dimensionality and improve model performance and interpretability.	Apply
CO 4	Design and implement domain-specific feature engineering strategies, including the generation of new features from structured, text, and time-based data.	Apply
CO 5	Analyze and apply current trends in automated feature engineering, deep feature synthesis, and ethical considerations in data-centric AI development.	Understand

## **SYLLABUS**

**Introduction to Data Preprocessing:** Types of data: structured vs. unstructured, Data understanding and collection, Handling missing and noisy data, Data integration and cleaning, Redundancy removal and quality metrics. **Data Transformation and Scaling:** Data normalization and standardization techniques, Categorical encoding methods, Feature binning and transformations, Outlier detection and treatment, **Feature Selection Techniques:** Importance and types of feature selection, Filter, wrapper, and embedded methods, Model-based feature importance, Multicollinearity handling, **Feature Engineering Strategies:** Domain-specific feature creation, Interaction and polynomial features, Date/time and text feature extraction, Basic image feature concepts, Feature construction and preprocessing pipelines, **Recent Advances and Automation:** AutoML and automated feature generation, Deep Feature Synthesis, Feature stores and engineering for deep learning, Dimensionality reduction techniques, Data-centric AI and real-world case studies

## **TEXT BOOKS**

- 1. Feature Engineering and Selection: A Practical Approach for Predictive Models, Max Kuhn and Kjell Johnson, CRC Press (2019)
- 2. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow (2nd or 3rd Edition), Aurélien Géron, O'Reilly Media

## REFERENCES

CS2U43G	Bio-Inspired Optimization Technique	PEC	2	1	0	3	2022

Bio-inspired algorithms and computation have become increasingly popular in the last two decades. The algorithms such as ant colony algorithms, firefly algorithms and particle swarm optimization have been applied in almost every area of science and engineering. This course covers novel algorithms to solve real-life, complex problems, combining well-known bio-inspired algorithms with new concepts. The objectives of this course are to learn bioinspired theorem and algorithms, to understand simulated annealing, genetic algorithm, differential evolution, swarm optimization, ant colony for feature selection.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the working mechanisms of bio-inspired algorithms.	Understand
CO 2	Explain the characteristics of combinatorial problems and relevant bio-inspired algorithms to be applied on it.	Understand
CO 3	Apply bio-inspired algorithms to solve combinatorial problems	Apply
CO 4	Explain the working methodology of bio-inspired algorithms.	Understand
CO 5	Evaluate the performance of different bio-inspired algorithms and compare it.	Apply

CS2U43H	TEXT MINING	PEC	2	1	0	3	2022

The objective of this course is to enable the learner that text mining is an essential field in data science that focuses on extracting meaningful insights from unstructured text data. This course provides an in-depth understanding of text preprocessing, representation, and analytical techniques using machine learning and natural language processing (NLP). Students will explore various methods for text classification, clustering, sentiment analysis, and information retrieval, along with real-world applications such as search engines, chatbots, and social media analytics. Hands-on experience with Python-based text mining tools and libraries will be emphasized.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course	Description	Level
Outcomes		
CO 1	Explain fundamental concepts of text mining and its applications.	Understand
CO 2	Explain text preprocessing techniques such as tokenization, stemming, and lemmatization.	Understand
CO 3	Apply machine learning models for text classification and clustering.	Apply
CO 4	Apply fundamental concepts of Information Retrieval and Sentiment Analysis to extract meaningful insights from textual data.	Apply
CO 5	Apply text mining techniques to develop practical solutions for real-world applications in social media and healthcare.	Apply

## SYLLABUS

Fundamental concepts and techniques of text mining, including text preprocessing, feature extraction, and representation methods such as TF-IDF and word embeddings.Supervised and unsupervised learning approaches for text classification, clustering, and topic modeling. Key applications like information retrieval and sentiment analysis.

## TEXTBOOKS

## **PROGRAM ELECTIVE 5**

#### **COURSE OVERVIEW**

This course helps the learners to understand the different architectural features of high-end processors. This course discusses the basics of high-end processors' architecture, Instruction-Level Parallelism, Data-Level Parallelism, Thread Level Parallelism, and GPU Architectures.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Describe different types of modern processing environments and parallel computing hardware.	Understand
CO 2	Summarize the concepts of Instruction Level Parallelism.	Understand
CO 3	Explain the idea of Data Level Parallelism.	Understand
CO 4	Demonstrate the concept of Thread Level Parallelism.	Understand
CO 5	Describe the basics of GPU architecture.	Understand

#### **SYLLABUS**

**Basics of Architecture** – Classes of Computers - Classes of Parallelism and Parallel Architectures – Defining Computer Architecture – Dependability – Quantitative Principles of Computer Design – Basics of Memory Hierarchies – Virtual Memory and Virtual Machines – Pipelining

**Instruction-Level Parallelism -** Concepts and Challenges – Basic Compiler Techniques for Exposing ILP – Reducing Branch Costs With Advanced Branch Prediction – Hardware-Based Speculation – Multithreading: Exploiting Thread-Level Parallelism to Improve Uniprocessor Throughput

**Data-Level Parallelism** – Vector Architecture – Graphics Processing Units – Detecting and Enhancing Loop-Level Parallelism

**Thread Level Parallelism** – Multiprocessor Architecture: Issues and Approach – Centralized Shared-Memory Architectures – Synchronization: The Basics – Introduction to Memory Consistency

**GPU Architectures** - The CPU-GPU system as an accelerated computational platform – The GPU and the thread engine – Multi-GPU platforms – Potential benefits of GPU – accelerated platforms

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS1U44B	Blockchain Technologies	PEC	2	1	0	3	2022

The purpose of this course is to create awareness and understanding among students on the foundation of blockchain technology. The course introduces the cryptographic principles behind blockchain and helps the students understand concepts like consensus, crypto-currency, smart contracts, use cases etc. The course enables students to develop simple decentralized applications using blockchain networks such as Ethereum.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Illustrate the cryptographic building blocks of blockchain technology	Understand
CO 2	Explain the fundamental concepts of blockchain technology.	Understand
CO 3	Summarize the classification of consensus algorithms.	Understand
CO 4	Explain the concepts of the first decentralized cryptocurrency bitcoin.	Understand
CO 5	Explain the use of smart contracts and its use cases.	Understand
CO6	Develop simple applications using Solidity language on Ethereum platform.	Apply

#### SYLLABUS

Fundamentals of Cryptography: Introduction to cryptography, Digital signature algorithms, Applications of cryptographic hash functions – Merkle trees, Distributed hash tables. Fundamentals of Blockchain Technology: Elements of blockchain. Consensus. Decentralization. Consensus Algorithms and Bitcoin: Consensus Algorithms, Bitcoin, Transactions, Blockchain, Mining, Wallets. Smart Contracts and Use cases: Smart Contracts, Decentralization, Decentralized applications. Ethereum and Solidity: Ethereum – The Ethereum network, The Ethereum Virtual Machine. The Solidity language, Smart contracts Case study.

End Semester Examination	:	100 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of introduction
CS2U44A	Knowledge Engineering and Expert Systems	PEC	2	1	0	3	2022

This course provides an in-depth exploration of knowledge engineering principles and the construction and use of knowledge graphs. It covers how knowledge graphs can be integrated with machine learning (ML) techniques to enhance data-driven insights and reasoning capabilities. The course combines theoretical knowledge with practical skills, enabling students to develop and deploy knowledge-based systems and explore the synergy between knowledge graphs and ML.

## i **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO1	Describe fundamental concepts of Knowledge engineering and its	Understand
	representation using semantic web technologies	
CO2	Use ontologies engineering to create and manage knowledge base	Apply
CO3	Illustrate construction and querying of Knowledge Graph (KG)	Understand
CO4	Apply basic concepts of expert systems and analyze real-world applications	Apply
CO5	Develop expert systems by selecting tools, acquiring knowledge, and addressing common development challenges.	Apply

#### SYLLABUS

Semantic Web and Ontologies enable machines to understand and process data meaningfully using standards like URI, XML, RDF, RDFS, and OWL for defining classes, instances, and relationships. SPARQL enables querying of RDF data, and tools like Protégé assist in ontology creation. Knowledge Graphs (KGs), built from linked data, represent relationships between entities and support tasks like data integration and ML, often implemented using Neo4j. Expert Systems, like PROSPECTOR, simulate expert reasoning, handling diagnostic or advisory tasks. Their development includes knowledge acquisition, tool selection, and system building, but challenges include knowledge elicitation and managing domain complexity.

#### **TEXTBOOKS**

- 3. Knowledge engineering and expert systems, Rastogi, P. N, Business Promotion Bureau, New Delhi, 1994
- 4. Domain-Specific Knowledge Graph Construction, Mayank Kejriwal, Springer, 2019
- 5. Knowledge Graphs -Methodology, Tools and Selected Use Cases, Dieter Fensel, Umutcan Simsek, Springer, 2019

#### REFERENCES

- 1. Paul Groth, Frank van Harmelen, Rinke Hoekstra. A Semantic Web Primer, Third Edition, MIT press; 2012.
- 2. Semantic Web concepts, technologies and applications, K K Breitman, M A Casanova, W Truszkowski, Springer, 2006

Module	Contents	No. of hours
I	Knowledge Engineering: Definition – Historical overview and significance in AI. Knowledge representation: Semantic web and Ontologies. Semantic Web Technologies: vision and goals – layered architecture – Semantic web standards: URI, XML, RDF and RDFS.	9
II	Ontology Engineering: Definition - OWL (Web Ontology Language) -	6

#### COURSE PLAN

	OWL Constructs: Classes, Instances and Properties in OWL – Complex Classes – Property Restrictions. Query Language: SPARQL queries – Advanced SPARQL. Graphs Ontology creation and management using Protégé.	
ш	Knowledge graphs (KG): Definition – DIKW Pyramid – Linked Data and Knowledge Graphs – Anatomy – Construction of KG: Data modelling – Integrating data – Data extraction and transformation – Embedding techniques for knowledge graphs – Building – Querying. Implementation of KG using Neo4j. Integrating KG and Machine Learning (ML) – KG feature source of ML. Case studies of knowledge graph applications.	10
IV	Introduction to Expert System Features of expert system, Representation and organization of knowledge, Basic characteristics, Types of problems handled by expert systems, Case study of PROSPECTOR	10
v	Building an Expert System Expert system development, Selection of tool, acquiring knowledge, Building process. Problems with Expert Systems Difficulties, common pitfalls in planning, Dealing with domain expert, Difficulties during development.	10
	Total	45 hours

#### **ASSESSMENT PATTERN**

## **Continuous Assessment**

End Semester Examination	:	100 marks
Total	:	50 marks
Assignment	:	15 marks
Continuous Assessment Tests	:	25 marks
Attendance	:	10 marks

Course Code	Course Name	Category	L	T	Р	Credit	Year of Introduction
CS2U44B	IoT for AI	PEC	2	1	0	3	2022

The objective of this course is to give an understanding in the Internet of Things, including the components, tools, and analysis through its fundamentals and real-world applications and to enable the students to develop IoT solutions including the softwares and programming of Raspberry Pi hardware.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course	Description	Level
Outcomes		
CO 1	Discuss domain-specific applications and the principles of IoT, including physical and logical design and deployment templates	Understand
CO 2	Interpret the principles of IoT and M2M, their differences, and key concepts like SDN, NFV, and essential management protocols.	Understand
CO 3	Develop the IoT design methodology, utilize Python for logical system design, and leverage key Python packages through practical case studies.	Apply
CO 4	Implement using Raspberry Pi with Python to control LEDs and switches, interface with other IoT devices.	Apply

#### SYLLABUS

Introduction to IoT - Physical Design of IoT, Logical Design of IoT, IoT levels and Deployment templates, Domain Specific IoT. - Platforms for IoT Applications and various protocols - IoT design methodology, Case study on IoT system - Programming Raspberry Pi with Python. Data Analytics for IoT

#### TEXTBOOKS

1. Internet of Things - a Hands On Approach, Arshdeep Bahga and Vijay Madisetti, Universities Press, 1/e, 2016.

#### REFERENCES

- 1. Internet of Things : Architecture and Design Principles, Rajkamal, McGraw Hill, 2/e, 2022.
- 2. The Internet of Things –Key applications and Protocols, Olivier Hersent, David Boswarthick, Omar Elloumi, Wiley, 1/e, 2012.

3. IoT fundamentals : Networking technologies, Protocols and use cases for the Internet of things, David Hanes Gonzalo. Salgueiro, Grossetete, Robert Barton, Cisco Press, 1/e, 2017

## **COURSE PLAN**

Module	Contents	Hours
I	Introduction to IoT - Physical Design of IoT, Logical Design of IoT, IoT levels and Deployment templates, Domain Specific IoT- Home automation, Energy, Agriculture, Health and lifestyle.	9
Π	Platforms for IoT Applications and various protocols: IoT and M2M- M2M, Difference between IoT and M2M, Software Defined Networking, Network Function virtualization, Need for IoT System Management, Simple Network Management Protocol (SNMP), NETCONF, YANG;	9
III	Platforms for IoT Applications:LPWAN - LPWAN applications, LPWAN technologies, Cellular (3GPP) and Non 3GPP standards, Comparison of various protocols like Sigfox, LoRA, LoRAWAN, Weightless, NB-IoT, LTE-M.	9
IV	Developing IoT - IoT design methodology, Case study on IoT system for weather monitoring, Motivations for using python, IoT-system Logical design using python, Python Packages of Interest for IoT - JSON, XML, HTTPlib & URLLib, SMTPLib	9
V	Programming Raspberry Pi with Python-Controlling LED with Raspberry Pi,Interfacing an LED and switch with Raspberry Pi, Other IoT devices- PcDino, Beagle bone Black, Cubieboard, Data Analytics for IoT	9
	Total Hours	45

#### ASSESSMENT PATTERN Continuous Assessment

End Semester Examination	:	100 marks
Total	:	50 marks
Assignment	:	15 marks
Continuous Assessment Tests	:	25 marks
Attendance	:	10 marks

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS2U44C	Big Data and Database Management	PEC	2	1	0	3	2022

This course provides a comprehensive understanding of database management systems (DBMS) and big data technologies. It covers fundamental database concepts, relational models, normalization techniques, and SQL queries before transitioning into big data analytics, NoSQL databases, and Hadoop-based distributed computing.

#### **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the fundamental concepts and architecture of Database Management Systems and their advantages over traditional file systems.	Understand
CO 2	Utilize the concepts of relational database and apply normalization techniques and functional dependencies for optimal relational database design.	Apply
CO 3	Explain the characteristics, types, implementation platforms and challenges of Big Data, and differentiate it from traditional data management systems	Understand
CO 4	Apply the types of analytics in Big Data and fundamental principles such as the CAP theorem and BASE concepts.	Apply
CO 5	Make use of the Hadoop ecosystem, architecture and components and apply Data Intensive tasks using the Map Reduce Paradigm	Apply

#### SYLLABUS

Introduction to DBMS: Overview of DBMS, DBMS vs. Files

**Relational Database design:** E-R Model, Constraints, SQL, Keys, Joins, Normalization (1NF-BCNF).

**Big Data:** Types, Characteristics (3Vs), Challenges, BI vs. Big Data, Data Warehouse, Hadoop. **Big Data Analytics:** CAP Theorem, BASE, NoSQL (Types, SQL vs. NoSQL vs. NewSQL). **Hadoop Ecosystem:** HDFS, MapReduce, YARN, Architecture, Components, Searching, Sorting, Compression.

#### **TEXT BOOKS**

1.Silberschatz A, Korth H F and Sudharshan S, "Database System Concepts", Sixth Edition, Tata McGraw-Hill Publishing Company Limited, 2010.

2. Seema Acharya, Subhashini Chellappan, "Big Data and Analytics", Wiley Publication, 2015.

- 1. Judith Hurwitz, Alan Nugent, Dr. Fern Halper, Marcia Kaufman, "Big Data for Dummies", John Wiley & Sons, Inc., 2013.
- 2. Tom White, "Hadoop: The Definitive Guide", O'Reilly Publications, 2011.

## **COURSE PLAN**

Module	Contents	Hours
I	Introduction: Overview of DBMS, File vs DBMS, elements of DBMS. Database design: E-R model, Notations, constraints, cardinality and participation constraints.	8
п	Relational Data Model: Introduction to relational model, Structure of relational mode, domain,keys, tuples to relational models, sql queries.Relational Database Design: Functional dependency, Normalization: 1NF,2NF,3NF,BCNF,table joins.	10
ш	Introduction to Big Data: Types of Digital Data – Characteristics of Data – Evolution of Big Data – Definition of Big Data – Challenges with Big Data-3Vs of Big Data – Non Definitional traits of Big Data – Business Intelligence vs. Big Data – Data warehouse and Hadoop environment – Coexistence.	10
IV	Big Data Analytics: Classification of analytics – Data Science – Terminologies in Big Data – CAP Theorem – BASE Concept. NoSQL: Types of Databases – Advantages – NewSQL – SQL vs. NOSQL vs NewSQL	9
V	Introduction to Hadoop: Features – Advantages – Versions – Overview of Hadoop Eco systems – Hadoop distributions – Hadoop vs. SQL – RDBMS vs. Hadoop – Hadoop Components – Architecture – HDFS – Map Reduce: Mapper – Reducer – Combiner – Partitioner – Searching – Sorting – Compression. Hadoop 2 (YARN): Architecture – Interacting with Hadoop Eco systems.	8
	Total Hours	45

Continuous Assessment						
Attendance	:	10 marks				
Continuous Assessment Tests	:	25 marks				
Assignment	:	15 marks				
Total	:	50 marks				
End Semester Examination	:	100 marks				

Course Code	Course Name	Categor y	L	Т	Р	Credit	Year of Introduction
CS1U44F	BIOINFORMATICS	PEC	2	1	0	3	2022

The objective of this course is to help the learners to understand the fundamental concepts in Molecular Biology, Genomics, Proteomics and Modelling. This course introduces bio macromolecules such as genes and proteins, different biological databases, and tools and algorithms for biological data processing, analysis and interpretation, and the elements of the systems approach to Molecular Biology. This course enables the learners to contribute towards drug discovery and computational analysis and modelling of biological processes.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	Description	Level
CO 1	Explain the basic concepts of Bioinformatics with an emphasis on structure, function and synthesis of biomolecules.	Understand
CO 2	Identify biological data formats and databases, retrieve bio- sequences, and align bio- sequences to identify similarity.	Apply
CO 3	Make use of similarity searching tools and algorithms to align sequences to highlight the similarity and describe the structure of genes.	Apply
CO 4	Make use of tools to demonstrate and visualize protein structure.	Apply
CO 5	Explain the fundamental aspects of Systems Biology, Computational Modeling and properties of models.	Understand

#### **SYLLABUS**

Introduction to bioinformatics, the Central Dogma, gene structure, and transcription-translation processes. Biological databases, sequence formats, and alignment methods. Database similarity searching with BLAST, multiple sequence alignment, and gene structure in prokaryotes and eukaryotes. Proteomics, including protein structure, visualization, and interaction networks. Systems biology, computational modelling, and data integration techniques.

## **TEXT BOOKS**

#### **COURSE PLAN**

Module	Contents	Hours
Ι	<b>Introduction to Bioinformatics</b> – Nature and scope of Bioinformatics, DNA, RNA & protein: The Central Dogma, Messenger RNA, tRNA, rRNA, Genetic code, Gene Structure and Control, Transcription, Translation.	8
	Introduction to Bio Sequences and Analysis - Introduction to Biological Databases, NCBI, GenBank, Bio sequence formats- FASTA,	
II	Sequence alignment- Global Alignment and Local Alignment, Dot Matrix Method, Dynamic Programming Method, Gap Penalties, Amino Acid Scoring Matrices - PAM and BLOSUM.	10
III	<b>Database Similarity Searching and genomics-</b> Database Similarity Searching, BLAST – Variants -BLASTN, BLASTP, BLASTX, Statistical Significance, Needleman and Wunsch and Smith–Waterman Method, Multiple Sequence Alignment, scoring function, Clustal, introduction to structure of prokaryotic and eukaryote gene.	10
IV	<b>Proteomics -</b> Protein Structure, Ramachandran Plot, Hierarchies of Protein Structure, Determination of Protein three-dimensional structure, protein structure database-PDB, Protein structure visualization, introduction to Protein protein interaction, STRING database.	9
V	<b>Systems Biology</b> - Introduction to Systems Biology, Models and Modelling, Properties of models, Systems state and steady state, Variables, Parameters, and Constants in modelling, Purpose and Adequateness of Models, Advantages of Computational Modelling, Model Development, Network Versus Elements, Modularity, Robustness and Sensitivity, Data Integration.	8
	Total Hours	45

Continuous Assessment							
Attendance	:	10 marks					
Continuous Assessment Tests	:	25 marks					
Assignment	:	15 marks					
Total	:	50 marks					
End Semester Examination	:	100 marks					

Course Code	Course Name	Catego ry	L	Т	Р	Credit	Year of Introduction
CS1U44G	COMPUTATIONAL LINGUISTICS	PEC	2	1	0	3	2020

The course to teach the basics of Computational Linguistics to the students viewing language phenomena from a computational/statistical standpoint. This involves ideas about statistical and computational models and how these could be linked with various language processing tasks. The course helps the learner to appreciate the complexities involved in language processing tasks using a machine, in contrast with the ease with which human beings handle them. Some practical aspects are also discussed using the Python and NLTK framework to equip the student with the capability to design solutions to linguistic problems.

#### **COURSE OUTCOMES**

After the completion of the course the student will be able to

CO1	Explain the fundamental concepts of language processing.	Understand			
CO2	Demonstrate the concepts of probability, statistical inference and hidder	Apply			
	Markov model.				
CO3	Compare and summarize the various methods of word sense	Apply			
	disambiguation, lexical acquisition and selectional preferences.				
CO4	4 Make use of different Part-of- Speech Tagging methods for language				
	modeling				
CO5	Examine Probabilistic Context Free Grammars and various probabilistic	Apply			
	parsing methods				
CO6	Develop simple systems linguistic tasks using Python and NLTK.	Apply			

#### **SYLLABUS**

Introduction to Computational Linguistics, The Ambiguity of Language, Linguistic Essentials, Part of Speech and Morphology, Phrase structure grammars, Probability Theory, Bayes theorem, Statistical Inference, n-gram Models, Markov Models, Word Sense Disambiguation, Dictionary based Disambiguation, Evaluation Measures, Semantic Similarity – Vector space measures – Probabilistic measures, Grammar – Part-of-Speech Tagging, Probabilistic Context Free Grammars Language Processing with Python-Introduction to NLTK.

#### TEXT BOOKS

 C.D. Manning and H. Schutze. Foundations of Statistical Natural Language Processing. MIT Press.
 Steven Bird, fEwan Klein, fEdward Lopper, Natural Language Processing with Python and NLTK. O'reilly Pub.

#### REFERENCES

Language Processing, Computational Linguistics and Speech Recognition, PHI.James Allen: Natural Language Understanding. Pearson Pub.

2.Nitin Hardeniya, Jacob Perkins, Deepti Chopra, Nisheeth Joshi, ItiMathur: Natural Language Processing: Python and NLTK., 1st Edition. Packt Publishing

#### **COURSE PLAN**

Module	Contents	No. of
		Hours
Ι	Introduction: Rationalist and Empiricist Approaches to Language Questions that	8
	inguistics should answer, Non- categorical phenomena in language-Language and	

	cognition as probabilistic phenomena, The Ambiguity of Language: Why natural anguage processing is difficult, Lexical resources – Word counts, Zipf's laws – Collocations-Concordances, Linguistic Essentials: Parts of Speech Morphology – Nouns and pronouns, Words that accompany nouns: Determiners and adjectives- Verbs Other parts of speech, Phrase Structure – Phrase structure grammars. Semantics and Pragmatics – Corpus Based Work	
II	Probability Theory – Probability spaces, Conditional probability and independence- Bayes'theorem, Random variables – Expectation and variance Notation, Joint and conditional distributions – Standard distributions – Bayesian statistics, Statistical Inference: n-gram Models over Sparse Data Bins: Forming Equivalence Classes, Markov Models – Hidden Markov Models: Why use HMMs?, General form of an HMM- Finding the probability of an observation – Finding the best state sequence	9
III	Methodological Preliminaries – Supervised and unsupervised learning, Upper and ower bounds on performance – Supervised Disambiguation, Bayesian classification- Dictionary based Disambiguation, Disambiguation based on sense definitions. Thesaurus based disambiguation, Lexical Acquisition Evaluation Measures, Verb Sub categorization- Attachment Ambiguity, PP attachment – Selectional Preferences, Semantic Similarity: Vector space measures – Probabilistic measures	10
IV	Part-of-speech Tagging – The Information Sources in Tagging, Markov Model Taggers – Hidden Markov Model Taggers, Applying HMMs to POS tagging- The effect of initialization on HMM training, Transformation – Based Learning of Tags. Probabilistic Context Free Grammars- Some Features of PCFGs, Questions for PCFGs, The Probability of a String – Using inside probabilities Using outside probabilities, Finding the most likely parse for a sentence parsing for disambiguation, parsing model vs. language model	9
V	Language Processing with Python- Introduction to NLTK, Text Wrangling and Fext cleansing: Sentence Splitter, Tokenization, Stemming, Lemmatization, Stop word removal, Rare word removal, Spell Correction, Part of Speech Tagging and NER, Parsing Structure in Text: Shallow versus deep parsing, types of parsers	9
	1 otai nours	43

# HONOURS

Course Code	Course Name	Category	L	Т	Р	Credit	Year of Introduction
CS1H40A	CYBER FORENSICS	VAC	3	1	0	4	2022

# **COURSE OVERVIEW**

The course on Cyber Forensics aims at exploring the basics of Cyber Forensics and Cyber security, the forensic investigation process and principles and the different types of cybercrimes and threats. This course also focuses on the forensic analysis of File systems, the Network, the Windows and Linux Operating systems. The course gives a basic understanding of the forensics analysis tools and a deep understanding of Anti forensics practices and methods. All the above aspects are dealt with case studies of the respective areas.

# **COURSE OUTCOMES**

After the completion of the course the student will be able to

Course Outcom es	Description	Level
CO1	Explain thebasic concepts in Cyber Forensics, Forensics Investigation Process and Cyber security	Understan d
CO2	Infer the basic concepts of File Systems and its associated attribute definitions	Understan d
CO3	Utilize the methodologies used in data analysis and memory analysis for detection of artefacts.	Apply
CO4	Identify web attacks and detect artefacts using OWASP and penetration testing.	Apply
CO5	Summarize anti-forensics practices and data hiding methods .	Understand

# **SYLLABUS**

**Computer Forensics:** History of computer forensics, preparing for computer investigations, understanding Public and private investigations- Forensics Investigation Principles - Forensic Protocol for Evidence Acquisition - Digital Forensics -Standards and Guidelines - Digital Evidence –Data Acquisition - storage formats for digital evidence, determining the best acquisition method, contingency planning for image acquisitions, Cyber Forensics tools- Challenges in Cyber Forensics, Skills Required to Become a Cyber Forensic Expert

**Cyber Security**: Cybercrimes, Types of Cybercrimes - Recent Data Breaches - Recent Cyber security Trends - Case Study: Sim Swapping Fraud, ATM Card Cloning, Hacking email for money,

Google Nest Guard, Email Crimes, Phishing, Types of Phishing.

**File system Analysis**: FAT and NTFS concepts and analysis -File system category, Content category, Metadata category, File name category, Application category, Application-level search techniques, Specific file systems, File recovery, Consistency check. FAT data structure-Boot sector, FAT 32 FS info, directory entries, Long file name directory entries.

**Windows Forensics**: Live Response- Data Collection- Locard's Exchange Principle, Order of Volatility Volatile and Non Volatile Data Live-Response Methodologies: Data Analysis- Agile Analysis, Windows Memory Analysis, Rootkits and Rootkit detection.

**Linux Forensics**: Live Response Data Collection- Prepare the Target Media, Format the Drive, Gather Volatile Information, Acquiring the Image, Initial Triage, Data Analysis- Log Analysis, Keyword Searches, User Activity, Network Connections, Running Processes, Open File Handlers, The Hacking Top Ten, Reconnaissance Tools

**Network Forensics:** The OSI Model, Forensic Footprints, Seizure of Networking Devices, Network Forensic Artifacts, ICMP Attacks, Drive-By Downloads, Network Forensic Analysis Tools, Case Study: Wireshark. Web Attack Forensics: OWASP Top 10, Web Attack Tests, Penetration Testing.

**Anti-Forensics:** Anti-forensic Practices - Data Wiping and Shredding- Data Remanence, Degaussing, Case Study: USB Oblivion, Eraser - Trail Obfuscation: Spoofing, Data Modification, Case Study: Timestamp – Encryption, Case Study: VeraCrypt, Data Hiding: Steganography and Cryptography, Case Study: SilentEye, Anti-forensics Detection Techniques, Case Study: Stegdetect.

Course Code	Course Name	Categor y	L	Т	Р	Credi t	Year of introductio n
CS2H40A	COMPUTATIONAL HEALTH INFORMATICS	VAC	3	1	0	3	2022

## **COURSE OVERVIEW**

This course helps learners to develop know-how in computational methods, algorithms, and tools commonly used in health informatics. This includes data mining, machine learning, statistical analysis, and visualization techniques. Also, the course helps to gain knowledge of applications of machine learning in healthcare and how to analyze medical images, interpret healthcare data, and understand the role of informatics in disease diagnosis.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

CO 1	Describe health informatics, including its principles, concepts, and applications of computational methods and techniques used in health informatics.	Understand
CO 2	Illustrate latest trends, advancements, and emerging technologies in computational health informatics.	Apply
CO 3	Demonstrate application of computational methods and techniques to analyze and manipulate medical images for various purposes, such as diagnosis, treatment planning, and research .	Apply
<b>CO 4</b>	Use the machine learning techniques to health images to aid in various aspects of healthcare, including diagnosis, treatment planning, and disease monitoring.	Apply
CO 5	Implement deep learning techniques to analyze and interpret medical images	Apply

## **SYLLABUS**

Introduction to Health Informatics, Emerging Technologies in Health Informatics, Medical Image Processing, Machine Learning in Medical Image Analysis, Deep Learning for Medical Image Processing.

## TEXTBOOKS

- 1. Translational Bioinformatics in Healthcare anMedicine. (2021). Netherlands: Elsevier Science.
- 2. Computational Analysis and Deep Learning for Medical Care: Principles, Methods, and Applications. (2021). United Kingdom: Wiley.

#### REFERENCES

- 1. Introduction to Computational Health Informatics. United States (2020) CRC Press.
- 2. Signal Processing Techniques for Computational HealthInformatics. (2020). Germany: Springer International Publishing.
- 3. Computational Intelligence and Healthcare Informatics. (2021). UnitedKingdom: Wiley.
- 4. Computational Intelligence for Machine Learning and Healthcare Informatics. (2020). Germany: De Gruyter.
- 5. Smart Computational Intelligence in Biomedical and Health Informatics. (2021). United States: CRC Press.
- 6. Healthcare Systems and Health Informatics: Using Internet of Things. (2022). United States: CRC Press.

Module	Contents	No. of hours
I	<b>Introduction to Health Informatics</b> Definition, scope, and objectives of health informatics, Historical development and current trends in health informatics, Health informatics frameworks and models, Health data standards (HL7, SNOMED CT, ICD, etc.), Interoperability challenges and solutions, Data capture, storage, and retrieval in health informatics, Data quality and integrity, Data analytics techniques and applications in healthcare, Data visualization for decision support.	9
II	<b>Emerging Technologies in Health Informatics</b> Artificial intelligence (AI) and machine learning in healthcare, Internet of Things (IoT) and its applications in healthcare, Hybrid IoT-NG-PON system, Blockchain technology in health informatics, Clinical research informatics, Genome sequencing and translational bioinformatics approach to genomics and precision medicine, IoT devices for healthcare, IoT beneficiaries in healthcare, IoT architecture, Data sharing and secondary use of health data.	9
ш	Medical Image Processing Overview of medical image processing and its significance in healthcare, Challenges and opportunities in medical image analysis, Principles of X- ray imaging, Magnetic Resonance Imaging (MRI) basics, Computed Tomography (CT) fundamentals, Ultrasound imaging and its characteristics, Image Enhancement Techniques, Contrast enhancement methods for medical images, Noise reduction and image denoising techniques, Image sharpening and edge enhancement.	10
IV	Machine Learning in Medical Image Analysis Image Segmentation, Thresholding techniques for image segmentation,	8

#### **COURSE PLAN**

	Region-based segmentation algorithms, Edge detection and contour- based segmentation, Feature Extraction and Representation, Supervised and unsupervised learning algorithms, Classification and regression techniques for medical image analysis, Performance evaluation and validation of machine learning models.	
V	<b>Deep Learning for Medical Image Processing</b> Convolutional Neural Networks (CNNs) for medical image analysis, Segmentation and object detection using deep learning, Transfer learning and pretrained models in medical imaging, Volumetric image analysis and 3D reconstruction, Image-based modeling and simulation, Advanced imaging modalities (functional MRI, diffusion tensor imaging), Artificial intelligence in medical image processing.	9
	Total	45

# ASSESSMENT PATTERN

Continuous Assessment		
Attendance	:	10 marks
Continuous Assessment Tests	:	25 marks
Assignment	:	15 marks
Total	:	50 marks
End Semester Examination	:	100 marks

Course Code	Course Name	Categor y	L	Т	Р	Credit	Year of Introduction
CS2H40B	Surveillance Video Analytics	VAC	3	1	0	4	2022

## **COURSE OVERVIEW**

This course aims to introduce students to basics of image processing, object detection, face recognition and video analytics.

## **COURSE OUTCOMES**

After the completion of the course, the student will be able to:

Course Outcomes	arse Description					
CO 1	Explain the basics of image processing techniques for computer vision and video analysis.	Understand				
CO 2	Explain the techniques used for image pre-processing.	Understand				
CO 3	Develop various object detection techniques.	Apply				
CO 4	Explain the various face recognition mechanisms.	Understand				
CO 5	Elaborate on deep learning-based video analytics.	Understand				

## SYLLABUS

Computer Vision – Image representation and image analysis tasks-Local pre-processing - Image smoothing-Object detection – Object detection methods -FaceRecognition-Introduction-Applications of Face Recognition-Video Processing – use cases of video analytics

## **TEXT BOOKS**

- 1. Milan Sonka, Vaclav Hlavac, Roger Boyle, "Image Processing, Analysis, and Machine Vision", 4nd edition, Thomson Learning, 2013
- 2. Vaibhav Verdhan, 2021, Computer Vision Using Deep Learning Neural Network Architectures with Python and Keras, Apress 2021(UNIT-III,IV and V)

## REFERENCES

- 1. Richard Szeliski, "Computer Vision: Algorithms and Applications", Springer Verlag London Limited, 2011.
- 2. Caifeng Shan, FatihPorikli, Tao Xiang, Shaogang Gong, "Video Analytics for Business Intelligence", Springer, 2012.

3. D. A. Forsyth, J. Ponce, "Computer Vision: A Modern Approach", Pearson Education, 2003.

# **COURSE PLAN**

Module	Contents	Hours
I	Computer Vision – Image representation and image analysis tasks - Image representations – digitization – properties – color images – Data structures for Image Analysis - Levels of image data representation - Traditional and Hierarchical image data structures.	9
п	Local pre-processing - Image smoothing - Edge detectors - Zero-crossings of the second derivative - Scale in image processing - Canny edge detection - Parametric edge models - Edges in multispectral images - Local pre- processing in the frequency domain - Line detection by local preprocessing operators - Image restoration.	9
Ш	Object detection– Object detection methods – Deep Learning framework for Object detection– bounding box approach-Intersection over Union (IoU) – Deep Learning Architectures-R-CNN-Faster R-CNN-You Only Look Once(YOLO)-Salient features-Loss Functions-YOLO architectures	9
IV	Face Recognition-Introduction-Applications of Face Recognition-Process of Face Recognition- DeepFace solution by Facebook-FaceNet for Face Recognition- Implementation using FaceNetGesture Recognition.	9
V	Video Processing – use cases of video analytics-Vanishing Gradient and exploding gradient problem - RestNet architecture-RestNet and skip connections-Inception Network-GoogleNet architecture Improvement in Inception v2-Video analytics-RestNet and Inception v3.	9
	Total Hours	45

## ASSESSMENT PATTERN

Continuous Assessment							
Attendance	:	10 marks					
Continuous Assessment Tests	:	25 marks					
Assignment	:	15 marks					
Total	:	50 marks					
End Semester Examination	:	100 marks					

CS1H4 9A	MINI PROJECT	CATEGO RY	L	Т	Р	CREDIT	YEAR OF INTRODUCTION
		PWS	0	1	6	4	2020

**COURSE OVERVIEW:** The objective of this course is to apply the fundamental concepts of courses learned in respective Honors Streams: Security in Computing, Machine Learning and Formal Methods. This course helps the learners to get an exposure to the development of application software/hardware solutions/ software simulations in the field of Computer Science and Engineering. It enables the learners to understand the different steps to be followed such as literature review and problem identification, preparation of requirement specification & design document, testing, development and deployment. Mini project enables the students to boost their skills, widen the horizon of thinking and their ability to resolve real life problems.

COURSE OUTCOMES : After the completion of the course the student will be able to

C O#	СО	
C 01	Identify technically and economically feasible problems .	Apply
C 02	Identify and survey the relevant literature for getting exposed to related solutions.	Apply
С О3	Perform requirement analysis, identify design methodologies and develop adaptable & reusable solutions of minimal complexity by using modern tools & advanced programming techniques.	Apply
C O4	Prepare technical report and deliver presentation .	Apply
C 05	Apply engineering and management principles to achieve the goal of the project .	Apply

## **COURSE PLAN**

Students are expected to follow the following steps.

- 1. Review of Literature and Identification of a problem
- 2. Create an abstract with a problem statement, solution approach, technology stack, team, etc.
- 3. Create Requirements Specification
- 4. Create Design Document . This may include designs like,
  - a. System Architecture Design

- b. Application Architecture Design
- c. GUI Design
- d. API Design
- e. Database Design
- f. Technology Stack
- 5. Deployment, Test Run & Get Results
- 6. Prepare Project Report

Guidelines for the Report preparation

A bonafide report on the mini project shall be submitted within one week after the final presentation. Minimum number of pages should be 40.

- Use Times New Roman font for the entire report Chapter/Section Title Times New Roman18, Bold; Heading 2 – Times New Roman16, Bold; Heading 3 – Times New Roman14, Bold; Body- Times New Roman 12, Normal.
- Line Spacing Between Heading 2 3 lines, between lines in paragraph 1.5 lines.
- Alignments Chapter/Section Title Center, Heading 2 & 3 should be Left Aligned. Ensure that all body text is paragraph justified.
- Figures & Tables Ensure that all Figures and Tables are suitably numbered and given proper names/headings. Write figure title under the figure and table title above the table.
- Suggestive order of documentation:
  - i. Top Cover
  - ii. Title page
  - iii. Certification page
  - iv. Acknowledgment
  - v. Abstract
  - vi. Table of Contents
  - vii. List of Figures and Tables
  - viii. Chapters
  - ix. Appendices, if any
  - x. References/Bibliography
