PRINCIPAL'S MESSAGE

Traditional job markets can't absorb everyone, especially with rising competition and automation, making self-employment essential. A paradigm shift from job seekers to job creators is a fundamental change in mindset and economic focus, moving from individuals seeking employment within existing structures to those creating opportunities by starting businesses, solving problems, and innovating. This shift is driven by changing education, technology, and a desire for autonomy, which fosters economic growth and tackles unemployment by multiplying jobs rather than just filling them. This shift emphasizes entrepreneurship, problem-solving skills, and cultural change transforming students and graduates into value creators. Entrepreneurship among Indian engineering students is rapidly growing, driven by innovation and a thriving startup ecosystem, with engineers increasingly launching successful ventures in tech, fintech, and e-commerce, supported by government and institutional initiatives. MBCET has been fostering a culture of innovation and entrepreneurship through a number of related curricular and co-curricular initiatives. The well-equipped Innovation and Entrepreneurship Development Centre (IEDC) and MBCET Incubation Centre together provide an excellent launchpad for the students to venture into the start-up ecosystem, giving them an early advantage in building their own futures.
