PRINCIPAL'S MESSAGE

World Health Day is observed on April 7th every year, marking the founding of the World Health Organization (WHO) in 1948 as a global reminder to prioritize our health and wellbeing. The day aims to raise awareness about global health issues, promote healthy living and disease prevention, advocate for universal healthcare access, mobilize action on pressing health concerns. Good health is crucial for a fulfilling life, enabling individuals to live longer, prevent diseases, maintain mental well-being, and achieve personal and professional goals, ultimately contributing to a healthier and more productive society. The World Health Day 2026 theme is "Together for Health. Stand with Science." The campaign champions evidence-based medicine, scientific collaboration, and trust in science to tackle global health challenges. It focuses on protecting the health of people, animals, and the planet, highlighting the interconnectedness of human, animal, and environmental health. Let us be part of the year-long campaign by engaging with evidence, facts, and science-based guidance to protect health, rebuild trust in science and public health, and support science-led solutions for a healthier future.
